**Chapter #8:-**  
"Linear Graphs and  
their Applications."

### Basic Concepts

- i) Coordinate Plane.
- ii) Ordered Pair.
- iii) Coordinate Axes.
- iv) Abscissa.
- v) Ordinate.
- vi) Origin.
- vii) Quadrant.
- viii) Collinear Points.
- ix) Ex. 8.1.
- x) Ex. 8.2, Q3 (only)
- xi) Conversion.
- xii) Note.
- xiii) Review Ex 8. (without Q6).

Instructor  
**Rana Mujeeb**  
0303-6098695

Instructor  
**Rana Mujeeb**  
0303-6098695

## i) Coordinate Plane:-

Instructor  
**Rana Mujeeb**  
0303-6098695

The plane formed by two straight lines perpendicular to each other is called coordinate plane and the lines are called coordinate axes.

Example:-

Instructor  
**Rana Mujeeb**  
0303-6098695

## ii) Ordered Pair:-

An ordered pair is a pair of elements in which elements are written in specific order.

Example:-

$(x, y)$ ,  $(0, -1)$ , etc.

Instructor  
**Rana Mujeeb**  
0303-6098695

### iii) Coordinate axes:-

The plane formed by two straight lines perpendicular to each other is called coordinate plane and the lines are called coordinate axes.

Example:-

Instructor

**Rana Mujeeb**

0303-6098695

### iv) Abcissa:-

The  $x$ -coordinate of a point is called abscissa.

Example:-

(3, 4)

Here, 3 is a abscissa.

Instructor

**Rana Mujeeb**

0303-6098695

### v) Ordinate:-

The  $y$ -coordinate <sup>of a point</sup> is called ordinate.

Example:-

(3, 4)

Here, 4 is a ordinate.

Instructor

**Rana Mujeeb**

0303-6098695

## vi) Origin:-

The point of intersection of two coordinate axes is called origin. It is represented by "O".

Example:-

Instructor

**Rana Mujeeb**

0303-6098695

## vii) Quadrant:-

In any one of quadrants of the plane namely  $XOY$ ,  $YOX'$ ,  $X'OY'$  and  $Y'OX$  respectively called first, 2nd, 3rd and 4th quadrant of the plane subdivided by the coordinate axes of the plane. They are denoted by Q-I, Q-II, Q-III, Q-IV respectively.

Example:-

Instructor

**Rana Mujeeb**

0303-6098695

## Collinear Points:-

The set of points which lie on the same line are called collinear points.

Example:-

Here, A and B and C are collinear points.

Instructor

**Rana Mujeeb**  
0303-6098695

ix) **Ex 8.1:-**

1- Determine the quadrant of the coordinate plane in which the following points lie;

Instructor

**Rana Mujeeb**  
0303-6098695

$P(-4, 3)$

This point is lie on the Q-II.

$Q(-5, -2)$

This point is lie on the Q-III.

$R(2, 2)$

This point is lie on the Q-I.

$S(2, -6)$

This point is lie on the Q-IV.

2- Draw the graph of each of the following.

Instructor

**Rana Mujeeb**

a)  $x = 2$

Instructor

**Rana Mujeeb**

0303-6098695

b)  $x = -3$

Instructor

**Rana Mujeeb**

0303-6098695

c)  $y = -1$

Instructor

**Rana Mujeeb**

0303-6098695

e)  $y = 0$

f)  $x = 0$

Instructor  
**Rana Mujeeb**  
0303-6098695

g)  $y = 3x$

$y = 3x \rightarrow \textcircled{1}$

Table:-

x	1	-1	0
y	3	-3	0

Instructor  
**Rana Mujeeb**  
0303-6098695

h)  $-y = 2x$

$y = -2x \rightarrow \textcircled{1}$

Table:-

x	1	-1	0
y	-2	2	0

Instructor  
**Rana Mujeeb**  
0303-6098695

Instructor  
**Rana Mujeeb**  
 0303-6098695

i)  $\frac{1}{2} = x$

Instructor  
**Rana Mujeeb**  
 0303-6098695

j)  $3y = 5x$   
 $y = \frac{5}{3}x$

Table:-

x	3	-3	0
y	5	-5	0

k)  $2x - y = 0$

$2x = y \rightarrow \textcircled{1}$

Table:

x	1	-1	0
y	2	-2	0

Instructor

**Rana Mujeeb**

0303-6098695

l)  $2x - y = 2$

$2x = 2 + y$

$2x - 2 = y \rightarrow \textcircled{1}$

Table:

x	2	-1	-2
y	2	-4	-6

Instructor

**Rana Mujeeb**

0303-6098695

$$m) x - 3y + 1 = 0$$

Instructor

**Rana Mujeeb**

0303-6098695

Instructor

**Rana Mujeeb**

0303-6098695

$$n) 3x - 2y + 1 = 0$$

$$3x + 1 = 2y$$

$$2y = 3x + 1$$

Instructor

**Rana Mujeeb**

0303-6098695

Table -

x	y
1	2
-1	5

Instructor  
**Rana Mujeeb**  
 0303-6098695

3- Are the following lines (i) parallel to x-axis (ii) parallel to y-axis.

i)  $2x - 1 = 3$

$$2x - 1 = 3$$

$$2x = 3 + 1$$

$$2x = 4$$

$$x = \frac{4}{2}$$

$$x = 2$$

This line is parallel to y-axis

ii)  $x + 2 = 1$

$$x = 1 - 2$$

$$x = -1$$

This line is parallel to y-axis

Instructor  
**Rana Mujeeb**  
 0303-6098695

Instructor  
**Rana Mujeeb**  
 0303-6098695

iii)  $2y + 3 = 2$

Instructor  
Rana Mujeeb  
0303-6098695

This line is parallel to x-axis.

iv)  $x + y = 0$

$x = -y$

This line is neither parallel to x-axis and  
nor parallel to y-axis.

v)  $2x - 2y = 0$

$2x = 2y$

$x = \frac{2y}{2}$

$x = y$

Instructor  
Rana Mujeeb  
0303-6098695

This line is neither parallel to x-axis,  
and nor parallel to y-axis.

4- Find the value of m and  
c of the following lines by  
expressing them in the form  $y = mx + c$ .

a)  $2x + 3y - 1 = 0$

Let,

$y = mx + c \rightarrow (1)$

Now,

$2x + 3y - 1 = 0$

$3y = 1 - 2x$

$y = \frac{1 - 2x}{3} \rightarrow (2)$

Instructor  
Rana Mujeeb  
0303-6098695

$$\frac{2x + y}{3} = 2 \text{ and } 6$$

b)  $x - 2y = -2$

$$x - 2y = -2$$

$$2x - 4y = -4$$

$$x - 2y = -2$$

$$x - 2y = -2$$

Instructor  
**Rana Mujeeb**  
 0303-6098695

$$\frac{1}{2}x + \frac{1}{2}y = 1$$

$$\frac{1}{2}x + \frac{1}{2}y = 1$$

$$\frac{1}{2}x + \frac{1}{2}y = 1$$

$$\frac{1}{2}x + \frac{1}{2}y = 1$$

c)  $3x + y = 1$

$$3x + y = 1$$

Instructor  
**Rana Mujeeb**  
 0303-6098695

$$3x + y = 1$$

$$3x + y = 1$$

$$3x + y = 1$$

$$3x + y = 1$$

d)  $2x - y = 7$

Let,

$$y = mx + c$$

Now,

$$2x - y = 7$$

$$2x - y = 7$$

$$\text{By comparing, } m = 2, c = -7$$

$$m = 2, c = -7$$

Instructor

Rana Mujeeb

0303-6098695

e)  $3 - 2x + y = 0$

Let,

$$y = mx + c$$

Now,

$$3 - 2x + y = 0$$

$$y = -3 + 2x$$

$$\text{By comparing, } m = 2, c = -3$$

$$m = 2, c = -3$$

Instructor

Rana Mujeeb

0303-6098695

f)  $2x + y + 3 = 0$

Let,

$$y = mx + c$$

Now,

$$2x + y + 3 = 0$$

$$2x + y = -3$$

$$\text{By comparing, } m = -2, c = -3$$

$$m = -2, c = -3$$

Instructor

Rana Mujeeb

0303-6098695

5- verify whether the following point lies on the line  $2x - y + 1 = 0$  or not.

i) (2,3)

Let,

$$\begin{aligned} 2x - y + 1 &= 0 \\ \text{Put } (2,3) \text{ in eq. 1} \\ 2(2) - 3 + 1 &= 0 \\ 4 - 3 + 1 &= 0 \\ 1 + 1 &= 0 \\ 2 &\neq 0 \end{aligned}$$

Instructor  
**Rana Mujeeb**  
0303-6098695

The point does not lie on the line

ii) (0,0)

Let,

$$\begin{aligned} 2x - y + 1 &= 0 \\ \text{Put } (0,0) \text{ in eq. 1} \\ 2(0) - 0 + 1 &= 0 \\ 0 - 0 + 1 &= 0 \\ 1 &\neq 0 \end{aligned}$$

Instructor  
**Rana Mujeeb**  
0303-6098695

The point does not lie on the line

iii) (-1,1)

Let,

$$\begin{aligned} 2x - y + 1 &= 0 \\ \text{Put } (-1,1) \text{ in eq. 1} \\ 2(-1) - 1 + 1 &= 0 \end{aligned}$$

Instructor

Rana Majeed  
0303-6098695

$$2x - y + 1 = 0$$

$$2 - 5 + 1 = 0$$

iv) (2, 5)

Let,

$$2x - y + 1 = 0 \quad \text{--- (1)}$$

Put (2, 5) in eq (1)

$$2(2) - 5 + 1 = 0$$

$$4 - 5 + 1 = 0$$

$$-1 + 1 = 0$$

$$0 = 0$$

Instructor

Rana Majeed  
0303-6098695

The point lie on the line

v) (5, 3)

Let,

$$2x - y + 1 = 0 \quad \text{--- (2)}$$

Put (5, 3) in eq (2)

$$2(5) - 3 + 1 = 0$$

$$10 - 3 + 1 = 0$$

$$8 \neq 0$$

Instructor

Rana Majeed  
0303-6098695The point does not lie  
on the line.Ex: B.2Q3: Sketch the graph on graph paper  
of the following.

$$w) \quad x - 3y + 2 = 0$$

Instructor

**Rana Mujeeb**

0303-6098695

$$y = \frac{2+x}{3}$$

x	1	4	-5
y	1	2	-1

Instructor

**Rana Mujeeb**

0303-6098695

$$b) \quad 3x - 2y - 1 = 0$$

$$3x - 1 = 2y$$

$$\frac{3x - 1}{2} = y$$

Instructor

**Rana Mujeeb**

0303-6098695

Instructor  
**Rana Mujeeb**  
 0303-6098695

c)  $2y - x + 2 = 0$

$2y = x - 2$

$y = \frac{x-2}{2}$

Instructor  
**Rana Mujeeb**  
 0303-6098695

Table

x	2	4	-2
y	0	1	-2

d)  $y - 2x = 0$

Instructor  
Rana Mujeeb  
0303-6098695

Table:-

$x$	1	-1	$\dots$
$y$	2	-2	0

Instructor  
Rana Mujeeb  
0303-6098695

e)  $3y - 1 = 0$

$3y = 1$   
 $y = \frac{1}{3}$

Instructor  
Rana Mujeeb  
0303-6098695

f)  $y + 3x = 0$

Instructor:  
Rana Mujeeb  
0303-6098695

x	1	-1	0
y	-3	3	0

g)  $2x + 6 = 0$

Instructor:  
Rana Mujeeb  
0303-6098695

$$2x = -6$$

$$x = \frac{-6}{2}$$

$$x = -3$$

Instructor:  
Rana Mujeeb  
0303-6098695

# i) Conversion:-

a) Km to mile / mile to Km:-

1000 m = 1 km

Rana Mujeeb

0303-6058695

$$1 \text{ mile} = 1.6 \text{ km}$$

b) Hectare to Acre / Acre to Hectare:-

$$1 \text{ Hectare} = 2.5 \text{ Acre}$$

$$1 \text{ Acre} = 0.4 \text{ Hectare}$$

c) US Dollar to PKR:-

$$1 \text{ US \$} = 1646 \text{ Rupees}$$

d) C to F / F to C:-

$$C = \frac{5}{9} (F - 32)$$

$$F = \frac{9}{5} C + 32$$

Instructor

Rana Mujeeb

0303-6058695

## ii) Note:-

•  $(x, y)$  is an ordered pair where 1st element is  $x$  and 2nd element is  $y$  such that  $(x, y) \neq (y, x)$  where,  $x \neq y$ .

•  $(2, 3)$  and  $(3, 2)$  are two different ordered pairs.

•  $(x, y) = (m, n)$  only if  $x = m$  and  $y = n$ .

• Each point  $P$  of Plane can be identified by the coordinates of the pair  $(x, y)$  and is represented by  $P(x, y)$ .

• A line of points of plane may be called x-axis if they lie on x-axis i.e.,  $P(2, 0)$  etc. on x-axis.

## REVIEW Ex 2:-

1-choose the correct options.

Q1. If  $x = 1$  and  $y = 1$ , then  $(x, y)$  is  
 (a)  $(1, 1)$  (b)  $(1, 1)$  (c)  $(1, 1)$  (d)  $(1, 1)$

Q2. If  $x = 0$  and  $y = 0$ , then  $(x, y)$  is  
 (a)  $(0, 0)$  (b)  $(1, 0)$  (c)  $(0, 0)$  (d)  $(1, 1)$

Q3. The point  $(-1, 2)$  lies in which quadrant?  
 (a) I (b) II (c) III (d) IV

Q4. If  $y = 2x + 1$ ,  $x = 2$  then  $y$  is  
 (a) 2 (b) 3 (c) 4 (d) 5

Q5. Which ordered pair satisfies the equation  $y = 2x$ ?

(a)  $(1, 2)$  (b)  $(2, 1)$  (c)  $(2, 2)$  (d)  $(0, 1)$

2-Identify the following which statement is true or false?

Q1. The point  $C(0, 0)$  is in quadrant III.  
False

Q2. The point  $P(2, 0)$  lies on x-axis. True

Q3. The graph of  $x = -2$  is a vertical line. True

Q4.  $y = 2$  is a horizontal line. True

Q5. The point  $Q(-1, 2)$  is in quadrant III.  
False

Instructor

Rana Mujeeb

0303-6098695

True

True

False

3- Draw the following graph on graph paper.

$(-6, 4), (-4, 6), (4, 5), (5, 3)$

## Chapter No 9-

"Introduction to  
Coordinate Geometry."

### Basic Concepts:-

- (i) Plane Geometry.
- (ii) Coordinate geometry.
- (iii) Collinear & non-collinear points.
- (iv) Triangle:
  - (i) Types of triangle.
  - (ii) Parallelogram.
  - (iii) Rectangle.
  - (iv) Square.
- (v) Distance Formula.
- (vi) Mid-point Formula.
- (vii) Ex 9.1.
- (viii) Ex 9.2 (Q1, 2, 3, 4, 6, 10 (only))
- (ix) Ex 9.3 (Q1 (only))
- (x) Review Ex 9.

## (i) Plane Geometry:-

The study of geometrical shapes in a plane is called plane geometry.

e.g.,

Instructor  
**Rana Mujeeb**  
0303-6098695

## (ii) Coordinate Geometry:-

Coordinate geometry is the study of geometrical shapes in the Cartesian plane (coordinate plane).

e.g.,

Instructor  
**Rana Mujeeb**  
0303-6098695

## (iii) Collinear & non-collinear points:-

### • Collinear points:-

The points which lie on the same straight line are called collinear points.

e.g.,

Here, A, B, C are collinear points

### • Non-Collinear Points:-

The points which do not lie on the same straight line is called

non collinear points

Instructor  
Rana Mujeeb  
0303-6098695

e.g.,

Here, A, B are collinear and C is non collinear.

### (iv) Triangle:-

A geometrical closed shape having three sides and three angles is called triangle.

e.g.,

(v) Types of triangles. - Instructor

• By Sides -

Rana Mujeeb  
0303-6098695

(a) Equilateral triangle. -

A triangle with all the sides of equal length is called equilateral triangle.

e.g.,

(b) Isosceles triangle. -

A triangle with two sides of equal length is called isosceles triangle.

e.g.,

Instructor

Rana Mujeeb  
0303-6098695

(c) Scalene triangle. -

A triangle with all the sides of different length is called scalene triangle.

e.g.,

# • By Angles.-

## (a) Acute angled triangle-

measuring less than  $90^\circ$  is called acute angled triangle

e.g.,

## (b) Right angled triangle-

A triangle with one interior angle measuring  $90^\circ$  is called right angled triangle

e.g.,

Instructor  
Rana Mujeeb  
0303-6038695

## (c) Obtuse angled triangle-

A triangle with one interior angle measuring greater than  $90^\circ$  is called obtuse angled triangle

e.g.,

Instructor  
Rana Mujeeb  
0303-6098695

### (vi) Parallelogram:-

Instructor

Rana Mujeeb

0303-6098695

- Opposite sides are equal in length.
- Opposite angles are equal.
- The diagonals bisect each other.

e.g.,

### (vii) Rectangle -

A figure formed in

the plane by four non-collinear points is called rectangle if,

- Its opposite sides are equal in length.
- The angle at each vertex is of measure  $90^\circ$ .

e.g.,

Instructor

Rana Mujeeb

0303-6098695

### (viii) Square:-

A square is a closed figure in the plane formed by four non-collinear points such that lengths of all sides

angle is  $90^\circ$ .

e.g.,

Instructor

Rana Mujeeb

0303-6098695

(x) Distance Formula -

If  $P(x_1, y_1)$  and  $Q(x_2, y_2)$  are two points and  $d$  is the distance between them, then

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

Instructor

Rana Mujeeb

0303-6098695

(x) Mid-point Formula:-

If  $P(x_1, y_1)$  and  $Q(x_2, y_2)$  are two points in the plane, then the mid-point  $R(x, y)$  of the line segment  $PQ$  is

$$R(x, y) = R\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$$

(xi) - Ex 9.1 -

1:- Find the distance between the following pairs of points.

(i)  $A(9,2), B(7,2)$

$$|AB| = \sqrt{|x_2 - x_1|^2 + |y_2 - y_1|^2}$$

$$|AB| = \sqrt{(7-9)^2 + (2-2)^2}$$

$$|AB| = \sqrt{(2)^2 + (0)^2}$$

$$|AB| = \sqrt{4+0}$$

$$|AB| = \sqrt{4}$$

$$|AB| = 2$$

Instructor

Rana Mujeeb

0303-6098695

(ii)  $A(2,-6), B(3,-6)$

$$|AB| = \sqrt{|x_2 - x_1|^2 + |y_2 - y_1|^2}$$

$$|AB| = \sqrt{(3-2)^2 + (-6-(-6))^2}$$

$$|AB| = \sqrt{(1)^2 + (0)^2}$$

$$|AB| = \sqrt{1+0}$$

$$|AB| = \sqrt{1}$$

$$|AB| = 1$$

$$|AB| = 1$$

Instructor

Rana Mujeeb

0303-6098695

(iii)  $A(-8,1), B(6,1)$

$$|AB| = \sqrt{|x_2 - x_1|^2 + |y_2 - y_1|^2}$$

$$|AB| = \sqrt{(6-(-8))^2 + (1-1)^2}$$

$$|AB| = \sqrt{(14)^2 + (0)^2}$$

$$|AB| = \sqrt{(4)^2}$$

$$|AB| = 4$$

Instructor

Rana Mujeeb

0303-6098695

(d)  $A(-4, \sqrt{2}), B(-4, -3)$

$$|AB| = \sqrt{|x_2 - x_1|^2 + |y_2 - y_1|^2}$$

$$|AB| = \sqrt{(-4 - (-4))^2 + (-3 - \sqrt{2})^2}$$

$$|AB| = \sqrt{(-4 + 4)^2 + (-3 - \sqrt{2})^2}$$

$$|AB| = \sqrt{(0)^2 + (-3 - \sqrt{2})^2}$$

$$|AB| = \sqrt{0 + (-3 - \sqrt{2})^2}$$

$$|AB| = \sqrt{(-3 - \sqrt{2})^2}$$

$$|AB| = \sqrt{(-1)^2 (3 + \sqrt{2})^2}$$

$$|AB| = \sqrt{1 (3 + \sqrt{2})^2}$$

$$|AB| = 3 + \sqrt{2}$$

Instructor

Rana Mujeeb

0303-6098695

(e)  $A(3, -11), B(3, -4)$

$$|AB| = \sqrt{|x_2 - x_1|^2 + |y_2 - y_1|^2}$$

$$|AB| = \sqrt{(3 - 3)^2 + (-4 - (-11))^2}$$

$$|AB| = \sqrt{(0)^2 + (-4 + 11)^2}$$

$$|AB| = \sqrt{0 + (7)^2}$$

$$|AB| = \sqrt{(7)^2}$$

$$|AB| = 7$$

(f)  $A(0,0), B(0,-5)$

$$AB = \sqrt{(0-0)^2 + (-5-0)^2}$$

$$AB = \sqrt{0^2 + (-5)^2}$$

$$AB = \sqrt{0 + 25}$$

$$AB = \sqrt{25}$$

$$AB = 5$$

2:- Let  $P$  be the point on  $x$ -axis with  $x$ -component  $a$  and  $Q$  be the point on  $y$ -axis with  $y$ -coordinate  $b$  as given below. Find the distance b/w  $P$  and  $Q$ .

(i)  $a=9, b=7$

Instructor  
Rana Mujeeb  
0303-6098695

Here

$$P \text{ is } (9,0), Q \text{ is } (0,7).$$

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$d = \sqrt{(0-9)^2 + (7-0)^2}$$

$$d = \sqrt{(-9)^2 + (7)^2}$$

$$d = \sqrt{81 + 49}$$

$$d = \sqrt{130}$$

ii)  $a = 2, b = 3$

Here,

Instructor  
Rana Mujeeb  
0303-6098695

P is  $(2, 0)$  , Q is  $(0, 3)$

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$d = \sqrt{(0 - 2)^2 + (3 - 0)^2}$$

$$d = \sqrt{(-2)^2 + (3)^2}$$

$$d = \sqrt{4 + 9}$$

$$d = \sqrt{13}$$

iii)  $a = -8, b = 6$

Here,

P is  $(-8, 0)$  , Q is  $(0, 6)$

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$d = \sqrt{(0 - (-8))^2 + (6 - 0)^2}$$

$$d = \sqrt{(0 + 8)^2 + (6)^2}$$

$$d = \sqrt{(8)^2 + 36}$$

$$d = \sqrt{64 + 36}$$

$$d = \sqrt{100}$$

$$d = 10$$

Instructor  
Rana Mujeeb  
0303-6098695

iv)  $a = -2, b = -3$

Here,

P is  $(-2, 0)$  , Q is  $(0, -3)$

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$d = \sqrt{(0 - (-2))^2 + (-3 - 0)^2}$$

$$d = \sqrt{1+0}$$

$$d = \sqrt{1}$$

Instructor

Rana Mujeeb

0303-6098695

$$iv) a = \sqrt{2}, b = 1$$

Here,

$$d = \sqrt{(-\sqrt{2})^2 + (1)^2}$$

$$d = \sqrt{2 + 1}$$

$$d = \sqrt{3}$$

Instructor

Rana Mujeeb

0303-6098695

$$v) a = -9, b = -4$$

Here,

$$P \text{ is } (-9, 0), Q \text{ is } (0, -4)$$

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$d = \sqrt{(0 - (-9))^2 + (-4 - 0)^2}$$

$$d = \sqrt{(0 + 9)^2 + (-4)^2}$$

$$d = \sqrt{(9)^2 + 16}$$

$$d = \sqrt{81 + 16}$$

$$d = \sqrt{97}$$

(Q.10) Ex Q 2 - <sup>instructor</sup> Rana Majeed  
0303 4028115

1:- Let  $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ ,  $B = \begin{pmatrix} 4 & 3 \\ 2 & 1 \end{pmatrix}$ ,  $C = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix}$ ,  $D = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix}$   
 $|A+B| = \sqrt{(1+4)^2 + (2+3)^2} = \sqrt{25+25} = \sqrt{50} = 5\sqrt{2}$   
 $|A-B| = \sqrt{(1-4)^2 + (2-3)^2} = \sqrt{9+1} = \sqrt{10}$   
 $|B-C| = \sqrt{(4-1)^2 + (3-2)^2} = \sqrt{9+1} = \sqrt{10}$   
 $|B-D| = \sqrt{(4-1)^2 + (3-2)^2} = \sqrt{9+1} = \sqrt{10}$   
 $|C-D| = \sqrt{(1-1)^2 + (1-2)^2} = \sqrt{0+1} = 1$   
 $|A-D| = \sqrt{(1-1)^2 + (2-2)^2} = \sqrt{0+0} = 0$   
 $|A-D| = \sqrt{(1-1)^2 + (2-2)^2} = \sqrt{0+0} = 0$

Here, \_\_\_\_\_

two sides are equal.

So, it is not a square.

2:- Let \_\_\_\_\_

$A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$ ,  $B = \begin{pmatrix} 4 & 3 \\ 2 & 1 \end{pmatrix}$ ,  $C = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix}$ ,  $D = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix}$

$D = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix}$

$$|A+B| = \sqrt{(1+4)^2 + (2+3)^2} = \sqrt{25+25} = \sqrt{50} = 5\sqrt{2}$$

$$|A-B| = \sqrt{(1-4)^2 + (2-3)^2} = \sqrt{9+1} = \sqrt{10}$$

$$|B-C| = \sqrt{(4-1)^2 + (3-2)^2} = \sqrt{9+1} = \sqrt{10}$$

$$|B-D| = \sqrt{(4-1)^2 + (3-2)^2} = \sqrt{9+1} = \sqrt{10}$$

$$|C-D| = \sqrt{(1-1)^2 + (1-2)^2} = \sqrt{0+1} = 1$$

$$|C-D| = \sqrt{(1-1)^2 + (1-2)^2} = \sqrt{0+1} = 1$$

$$|A-D| = \sqrt{(1-1)^2 + (2-2)^2} = \sqrt{0+0} = 0$$

$$|A-D| = \sqrt{(1-1)^2 + (2-2)^2} = \sqrt{0+0} = 0$$

Here, three sides are equal.

It is not a square.

Insector  
**Rana Majeed**  
 0303 4028115

Instructor  
Rana Mujeeb  
0303-6098695

3r- ...

$$|AB| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|AB| = \sqrt{(1 - 4)^2 + (1 - 10)^2}$$

$$|BC| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|BC| = \sqrt{(-2 - 1)^2 + (-3 - 1)^2}$$

$$|CA| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|CA| = \sqrt{(1 - (-2))^2 + (3 - (-1))^2}$$

According to Pythagoras theorem,

$$(\text{Hyp})^2 = (\text{Base})^2 + (\text{Perp})^2$$

Now,

$$|AB|^2 = 10$$

$$|BC|^2 = 52$$

$$|CA|^2 = 18$$

Instructor  
Rana Mujeeb  
0303-6098695

Hence,

$$\textcircled{a} 10 + 18 \neq 52$$

$$\textcircled{b} 10 + 52 \neq 18$$

$$\textcircled{c} 18 + 52 \neq 10$$

So, it is not a right angle triangle.

4r- Here,

A is (4, 10), B is (1, 1), C is (-2, -3).

$$|AB| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|AB| = \sqrt{(1 - 4)^2 + (1 - 10)^2} = \sqrt{9 + 81} = \sqrt{90}$$

$$|BC| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$= \sqrt{(-2)^2 + (0 - (-8))^2} = \sqrt{4 + 64} = \sqrt{68}$$

$$|A| = \sqrt{x_2^2 + y_2^2}$$

$$|A| = \sqrt{4 - (-2)^2 + (0 - (-8))^2} = \sqrt{36 + 64} = \sqrt{100}$$

As,

$$|AB| + |BC| = |CA|$$

$$\sqrt{90} + \sqrt{90} = \sqrt{360}$$

$$\sqrt{9 \times 10} + \sqrt{9 \times 10} = \sqrt{36 \times 10}$$

$$3\sqrt{10} + 3\sqrt{10} = 6\sqrt{10}$$

$$6\sqrt{10} = 6\sqrt{10}$$

So, the points A, B, C are collinear

6:- Here,

C is (-2, 15), A is (0, 7), B is (3, -5)

$$|CA| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|CA| = \sqrt{(0 - (-2))^2 + (7 - 15)^2} = \sqrt{4 + 64} = \sqrt{68}$$

$$|AB| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|AB| = \sqrt{(3 - 0)^2 + (-5 - 7)^2} = \sqrt{9 + 144} = \sqrt{153}$$

$$|CB| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|CB| = \sqrt{(3 - (-2))^2 + (-5 - 15)^2} = \sqrt{25 + 400} = \sqrt{425}$$

As,

$$|CA| + |AB| = |CB|$$

$$\sqrt{68} + \sqrt{153} = \sqrt{425}$$

$$\sqrt{4 \times 17} + \sqrt{9 \times 17} = \sqrt{25 \times 17}$$

$$2\sqrt{17} + 3\sqrt{17} = 5\sqrt{17}$$

$$5\sqrt{17} = 5\sqrt{17}$$

Instructor

Rana Mujeeb

0303-6098695

Instructor

Rana Mujeeb

0303-6098695

So, the points A, B, C are collinear

10. Here,

C is (-3, 6), P is (1, 3)

$$|CP| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$|CP| = \sqrt{(1 - (-3))^2 + (3 - 6)^2}$$

$$|CP| = \sqrt{(1+3)^2 + (-3)^2}$$

$$|CP| = \sqrt{(4)^2 + 9}$$

$$|CP| = \sqrt{16+9}$$

$$|CP| = \sqrt{25}$$

$$|CP| = 5$$

$$\text{Diameter} = 2 \times |CP|$$

$$\text{Diameter} = 2 \times 5$$

$$\boxed{\text{Diameter} = 10}$$

# Chapter # 10

## "Congruent Triangles"

**Q 1:-**

Instructor  
Rana Mujeeb  
0303-6098695

**Define congruent triangle?**

**Ans:-**

Instructor  
Rana Mujeeb  
0303-6098695

Two triangles are said to be congruent written symbolically as " $\cong$ " if their corresponding sides and angles are equal. Such that in two triangles corresponding sides and angles are equal.

$$\begin{array}{l} \triangle ABC \cong \triangle DEF \\ \left\{ \begin{array}{l} \overline{AB} \cong \overline{DE} \\ \overline{BC} \cong \overline{EF} \\ \overline{CA} \cong \overline{FD} \end{array} \right. \text{ or } \left\{ \begin{array}{l} \angle A \cong \angle D \\ \angle B \cong \angle E \\ \angle C \cong \angle F \end{array} \right. \end{array}$$

Q2:-

Instructor

Rana Majeed

0303-6023695

Define correspondence?

Ans:-

Let there be two triangles ABC and DEF. If the corresponding sides of the two triangles are equal, i.e.  $AB = DE$ ,  $BC = EF$ , and  $AC = DF$ , then the two triangles are said to be congruent. This is written as  $\triangle ABC \cong \triangle DEF$ . The corresponding angles are also equal, i.e.  $\angle A = \angle D$ ,  $\angle B = \angle E$ , and  $\angle C = \angle F$ .

Let  $\triangle ABC$  and  $\triangle DEF$  be two triangles. If  $\angle A = \angle D$ ,  $\angle B = \angle E$ , and  $\angle C = \angle F$ , then the two triangles are said to be congruent. This is written as  $\triangle ABC \cong \triangle DEF$ .

Q3:-

# Review Ex 10

1.

Which of the following are true and which are false?

i) \_\_\_\_\_

A ray has two end points False

ii) \_\_\_\_\_

In a triangle, there can be \_\_\_\_\_

one right angle. True

iii) \_\_\_\_\_

Instructor  
Rana Mujeeb  
0303-6098695

Three points are said to be \_\_\_\_\_

collinear if they lie on the same line True

iv) \_\_\_\_\_

Two parallel lines intersect \_\_\_\_\_

at a point. False

Instructor

Rana Mujeeb  
0303-6098695

v)

Two line can intersect only at  
one point. True

vi)

A triangle of congruent sides has  
non congruent angles. False

2.

If  $\triangle ABC \cong \triangle LMN$ , then

i)

$$m\angle M \cong m\angle B$$

Instructor

Rana Mujeeb  
0303-6098695

ii)

$$m\angle N \cong m\angle C$$

iii)

$$m\angle A \cong m\angle L$$

Instructor  
Rana Mujeeb  
0303-6098695

3.

If  $\triangle ABC \cong \triangle LMN$ , then find 'x'.

i)

Instructor  
Rana Mujeeb  
0303-6098695

40° L

As,

---  
- L -  
[ - - - ]

Instructor  
Rana Mujeeb  
0303-6098695

ii)

If  $\triangle LMN$ , then find 'x'.

Instructor  
Rana Mujeeb  
0303-6098695

Sum of Angles in triangle = 180°

$$m\angle M + m\angle L + m\angle N = 180^\circ$$

$$80^\circ + 40^\circ + x = 180^\circ$$

$$120^\circ + x = 180^\circ$$

DATE

$$x - 182^\circ = 120^\circ$$

$$x = 62^\circ$$

Instructor

Rana Mujeeb

0303 6098695

Q.4.

Find value of unknowns for the given congruent triangles.

As,

$$\angle B \cong \angle C$$

$$55 = 5x + 5$$

$$55 - 5 = 5x$$

$$50 = 5x$$

$$50/5 = x$$

$$10 = x$$

$$x = 10^\circ$$

As,

$$\overline{BD} \cong \overline{DC}$$

$$5m - 3 = 2m + 6$$

$$5m - 2m = 6 + 3$$

$$3m = 9$$

$$m = \frac{9}{3}$$

$$m = 3$$

Rana Mujeeb  
0303-6098699

Instructor  
Rana Mujeeb  
0303-6098699

iv)

S.S.S

Postulate:-

Instructor  
Rana Mujeeb  
0303-6098695

In a correspondence of two triangles, if three side. ~~are~~ are ~~corresponding~~ to the corresponding three side of other, then the two triangles are congruent (SSS  $\equiv$  SSS).

Instructor  
Rana Mujeeb  
0303-6098695

v)

H.S Postulate:-

If in the ~~corresponding~~ ~~angle~~ ~~are~~ ~~equal~~ ~~to~~ ~~the~~ ~~corresponding~~ ~~angle~~ ~~of~~ ~~the~~ ~~other~~ ~~triangle~~ ~~then~~ ~~the~~ ~~two~~ ~~triangles~~ ~~are~~ ~~congruent~~ ~~(ASA)~~

corresponding side of the other.  
 then the triangles are congruent  
 (H.S  $\cong$  H.S)

**Q5:-** VIP MCQ's:-

Instructor

Rana Mujeeb

0303-6098695

If two angles of a triangle  
 are congruent then the sides opposite  
 to them are congruent.

**Q6:-** If one angle of <sup>right</sup> triangle  
 is of  $30^\circ$  then what is its  
 hypotenuse?

**Ans:-** If one angle of a right  
 triangle is of  $30^\circ$ , the hypotenuse  
 is twice as long as the  
 side opposite to the angle.

## Chapter No 11

### "Parallelograms and Triangles"

#### Basic Concepts

- i. Polygons.
  - ii. Quadrilaterals.
  - iii. Trapeziums.
  - iv. Parallelograms.
  - v. Rhombus.
  - vi. Rectangles.
  - vii. Squares.
  - viii. Review Ex. 11.
  - ix. Some Important Concepts.
- ~~.....~~

# i. Polygons:-

Instructor

Rana Mujeeb

0303-6098695

Def:-

The word "polygon" consist of two words, one is "poly" which means "many" and other is "gon" which means "angles." Polygon is a closed figure formed by line-segments.

Exampler:-

Triangle

Rectangle

Pentagon

Hexagon

Instructor

Rana Mujeeb

0303-6098695

Formula:-

Sum of angles of polygon =  $(n-2) \times 180^\circ$

Here, "n" is a number of sides.

## ii. Quadrilateral:

Def:

Instructor

Rana Mujeeb

0303-6098695

The word "quadrilateral" consist of two words, one is "quadri" which means "four" and other is "lateral" which means "sides". A polygon with four sides, four angles and four vertices is called quadrilateral.

Example:-

Trapezium

Kite

Parallelogram

Rhombus

Rectangle

Square

Instructor

Rana Mujeeb

0303-6098695

### iii. Trapezium:

Instructor

Rana Mujeeb

0303-6098695

Def:-

is A quadrilateral with one pair of parallel sides is called trapezium.

OR

ii) A quadrilateral with two parallel sides and two unparallel sides is called trapezium.

Exampler:-

Trapeziums.

Instructor  
Rana Mujeeb  
0303-6098695

### iv. Parallelogram:-

Instructor

Rana Mujeeb

0303-6098695

Def:-

A figure formed by four non-collinear points in the plane is called a parallelogram if:-

DATE \_\_\_\_\_

i) Opposite sides are parallel and congruent.

ii) Opposite angles are congruent

iii) The diagonals bisect each other.

**Example:-**

Parallelogram.

Instructor

Rana Mujeeb

0303-6098695

**v. Rhombus:-**

**Def:-**

A parallelogram with all equal sides is called rhombus.

**Example:**

Rhombus.

Instructor

Rana Mujeeb

0303-6098695

Date: \_\_\_\_\_

## vi. Rectangle

Def:

Instructor: \_\_\_\_\_

Rana Mujeeb

0303-6098695

A figure formed in the plane by four non-collinear points is called rectangle if:-

- Its opposite sides are of equal measure
- Its opposite sides are parallel to each other
- The angle at each vertex is of measure of  $90^\circ$

Example:

Rectangle.

Instructor: \_\_\_\_\_

Rana Mujeeb

0303-6098695

## vii. Square:

Def:-

Instructor: \_\_\_\_\_

Rana Mujeeb

0303-6098695

A square is a closed figure in the plane formed by four non-collinear points such that lengths of all sides are equal and measure of each angle is  $90^\circ$ .

## Example:-

Square.

Instructor

Rana Mujeeb

0303-60-3695

## viii. Review Ex. 11:-

## 1. Fill in the blanks.

- i) In a parallelogram opposite sides are congruent.
- ii) In a parallelogram opposite angles are congruent.
- iii) Diagonals of a parallelogram intersect each other at a point.
- iv) Medians of a triangle are concurrent.
- v) Diagonals of a parallelogram divide the parallelogram into two congruent triangles.

Instructor

Rana Mujeeb

DATE

Instructor

Rana Mujeeb

0303-6098695

2. In parallelogram ABCD:-

i)  $m\overline{AB} \cong m\overline{DC}$

ii)  $m\overline{BC} \cong m\overline{AD}$

iii)  $m\angle 1 \cong m\angle 3$

iv)  $m\angle 2 \cong m\angle 4$

3. Find the unknowns in the given figure:-

As,

$m\angle A = m\angle C$  (opposite angles)

$75^\circ = n$

$n = 75^\circ$

Now,

$y^\circ = n^\circ$  (Alternate angles)

$y^\circ = 75^\circ$

Instructor

Rana Mujeeb

0303-6098695

As,

(supplementary angles)

$m\angle A + m\angle B = 180^\circ$

$75^\circ + x = 180^\circ$

$x = 180^\circ - 75^\circ$

$x = 105^\circ$

Now,

$m^\circ = x^\circ$  (opposite angles)

$m^\circ = 105^\circ$

Instructor

Rana Mujeeb

0303-6098695

4. If the given figure ABCD is a parallelogram, then find "x, m":-

Ans

$$m\angle A = m\angle C \text{ (opposite angles)}$$

$$55^\circ = 11x^\circ$$

$$\frac{55^\circ}{11} = x^\circ$$

$$x^\circ = 5^\circ$$

Instructor

Rana Mujeeb

0303-6098695

Now,

$$m\angle A + m\angle D = 180^\circ \text{ (supplementary angles)}$$

$$55^\circ + (5m + 10)^\circ = 180^\circ$$

$$55^\circ + (5m)^\circ + 10^\circ = 180^\circ$$

$$65^\circ + (5m)^\circ = 180^\circ$$

$$(5m)^\circ = 180^\circ - 65^\circ$$

$$(5m)^\circ = 115^\circ$$

$$m^\circ = \frac{115^\circ}{5} = 23^\circ$$

Instructor

Rana Mujeeb

0303-6098695

$$m^\circ = 23^\circ$$

Instructor

Rana Mujeeb

0303-6098695

5. The given figure LMNP is a parallelogram. Find value of "m, n".

$$m\overline{LP} = m\overline{MN} \text{ (opposite sides)}$$

$$4m+n=10 \rightarrow (i)$$

$$m\overline{LM} = m\overline{PN} \text{ (opposite sides)}$$

$$8m-4n=8 \rightarrow (ii)$$

By multiplying eq. (i) by 4,

$$4 \times (4m+n) = 10 \times 4$$

$$16m+4n=40 \rightarrow (iii)$$

By adding eq. (ii) and (iii),

$$8m-4n=8$$

$$16m+4n=40$$

$$24m=48$$

$$m = 48/24$$

$$\boxed{m=2}$$

By putting "m=2" in eq. (i),

$$4m+n=10$$

$$4(2)+n=10$$

$$8+n=10$$

$$n=10-8$$

$$\boxed{n=2}$$

Instructor

Rana Mujeeb

0303-6098695

6. In the question 5, sum of the opposite angles of the parallelogram is  $110^\circ$ , find the remaining angles.

$$m\angle L + m\angle M = 180^\circ \text{ (supplementary angles)}$$

$$55^\circ + m\angle M = 180^\circ$$

$$m\angle M = 180^\circ - 55^\circ$$

$$m\angle M = 125^\circ$$

$$m\angle P = m\angle M \text{ (opposite angles)}$$

$$m\angle P = 125^\circ$$

7. One angle of parallelogram is  $130^\circ$ , find the measure of remaining angles.

$$m\angle C = m\angle A \text{ (opposite angles)}$$

$$m\angle C = 130^\circ$$

$$m\angle A + m\angle B = 180^\circ \text{ (supplementary angles)}$$

$$130^\circ + m\angle B = 180^\circ$$

$$m\angle B = 180^\circ - 130^\circ$$

$$m\angle B = 50^\circ$$

$$m\angle D = m\angle B \text{ (opposite angles)}$$

$$m\angle D = 50^\circ$$

8. One exterior angle on the end side of parallelogram is  $40^\circ$ , find the remaining angles.

$$\boxed{x^\circ = 40^\circ} \text{ (Alternate angles)}$$

$$z^\circ = x^\circ \text{ (opposite angles)}$$

$$\boxed{z^\circ = 40^\circ}$$

$$z^\circ + y^\circ = 180^\circ \text{ (Supplementary angles)}$$

$$40^\circ + y^\circ = 180^\circ$$

$$y^\circ = 180^\circ - 40^\circ$$

$$\boxed{y^\circ = 140^\circ}$$

$$m^\circ = y^\circ \text{ (opposite angles)}$$

$$\boxed{m^\circ = 140^\circ}$$

Instructor

Rana Mujeeb

0303-6098695

## ix. Some Important Concepts:-

### 1. Diagonals:-

Instructor

Rana Mujeeb

0303-6098695

Def:-

A line segment that joins two non-adjacent vertices of a polygon is called a diagonal.

Instructor  
Rana Mujeeb  
0303-6098695

## Examples

## 2. Medians:

Instructor  
Rana Mujeeb  
0303-6098695

Def:-

Median of a triangle is a line segment that joins the vertex of triangle to the midpoint of opposite side.

### Example:

## 3. Concurrent:

Instructor  
Rana Mujeeb  
0303-6098695

Def:

If a set of lines intersect each other at same

point the line are called concurrent.

Example:-

Instructor  
Rana Mujeeb  
0303-6098695

Here, "p" is the point  
of concurrency

### 4. Theorem 11.1.2:-

If two opposite sides  
of a quadrilateral are congruent  
and parallel, it is a parallelogram.

Example:-

Instructor  
Rana Mujeeb  
0303-6098695

Parallelogram

### 5. Theorem 11.1.4:-

The medians of a  
triangle are concurrent and  
their point of concurrency

is the point of intersection  
of each median.

**Example:-**

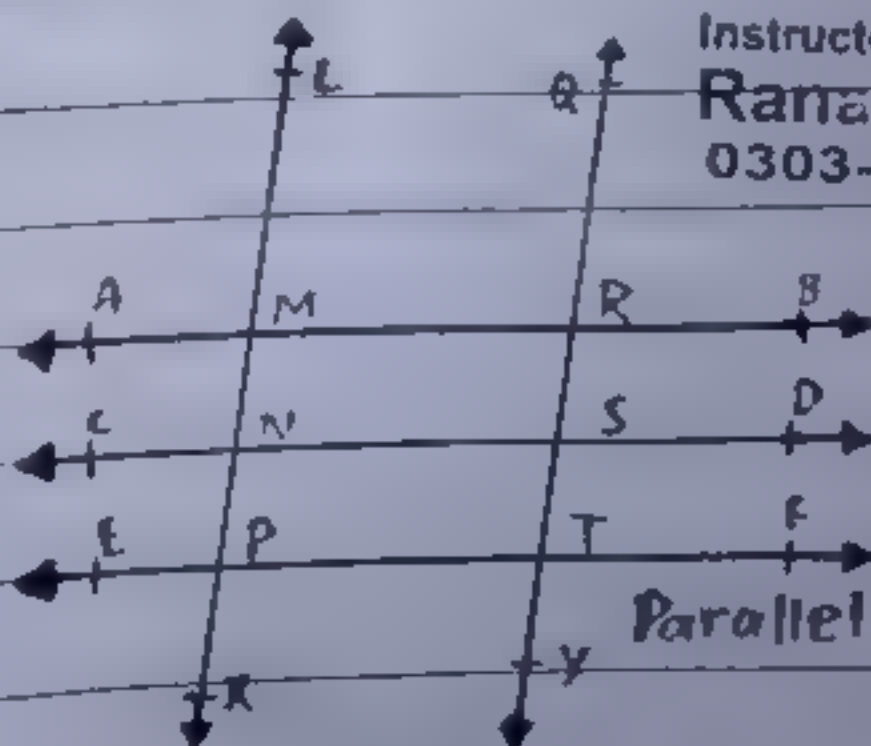

Triangle

Instructor  
Rana Mujeeb  
0303-6098695

**6. Theorem 11.1.5:-**

If three or more parallel lines make congruent segments on a transversal, they also intercept congruent segments on any other line that cuts them.

**Example:-**

Instructor  
Rana Mujeeb  
0303-6098695

Parallel lines

## Chapter #12-

### "Line Bisectors and Angle Bisectors."

Instructor

Rana Mujeeb

0303-6098695

### Basic Concepts:-

- (i) Bisector of Line segment.
- (ii) Right bisector of line segment.
- (iii) Bisector of an angle.
- (iv) Theorem 12.1.1.
- (v) Theorem 12.1.2.
- (vi) Theorem 12.1.3.
- (vii) Theorem 12.1.4.
- (viii) Theorem 12.1.5.
- (ix) Theorem 12.1.6.
- (x) Observe that.
- (xi) Note.
- (xii) Theorem.
- (xiii) Parts.
- (xiv) Statement.
- (xv) Given.
- (xvi) To Prove.
- (xvii) Figure.
- (xviii) Construction.
- (xix) Proof.
- (xx) Review Exercise 12(Q1,2,4,5,6)

Instructor

Rana Mujeeb

0303-6098695

## (i) Bisector of Line segment:-

A line  $l$  is called a bisector of a line segment if it passes through its mid-point.

## (ii) Right bisector of line segment:-

A line  $l$  is called right bisector of line segment if  $l$  is perpendicular to the line segment and passes through its mid-point.

## (iii) Bisector of an angle-

Bisector of an angle is a line or a ray that divides the given angle into two equal parts.

### (iv) Theorem 12.1.1:-

Any point on the right bisector of a line segment is equidistant from its end points.

### (v) Theorem 12.1.2:-

Any point equidistant from the end points of a line segment is on the right bisector of it.

(vi) Theorem 12.1.3:-

The right bisectors of the sides of a triangle are concurrent.

(vii) Theorem 12.1.4:-

Any point on the bisector of an angle is equidistant from its arms.

(viii) Theorem 12.1.5:-

Any point inside an angle, equidistant from its arms, is on the bisector of it.

## (ix) Theorem 12.1.6:-

The bisectors of the angles of a triangle are concurrent.

### (x) Observe that:-

- The right bisectors of the sides of an acute triangle intersect each other inside the triangle.
- The right bisectors of the sides of a right triangle intersect each other on the hypotenuse.
- The right bisectors of the sides of an obtuse triangle intersect each other outside the triangle.

Instructor  
Rana Mujib

### (xi) Note:-

In practical geometry also, by constructing angle bisectors of a triangle, we shall verify that they are concurrent.

Instructor  
Rana Mujib

**(xii) Theorem:**

Theorem — is a true statement which can be proven.

---

**(xiii) Parts of a Theorem:-**

(a) statement

(b) Given

(c) To Prove

(d) Figure

(e) Construction

(f) Proof.

Instructor  
Ranjit Singh  
0303-6098695

**(xiv) Statement:-**

The — description — of a theorem in words is called statement.

Instructor

Ranjit Singh

0303-6098695

**(xv) Given:-**

The condition described in the statement of theorem according to given figure is called given.

---

**(xvi) To Prove:-**

The required result of the theorem which is to be proven is called to prove.

---

Instructor

Ranjit Singh

0303-6098695

Instructor

Ranjit Singh

**(xvii) Figure:-**

A complete drawing of theorem according given statement is called figure.

Instructor \_\_\_\_\_  
**Rana Mujeeb**  
 0303-6098695

**(xviii) Construction:-**

The additional work done on the figure in order to prove theorem is called construction.

Instructor \_\_\_\_\_  
**Rana Mujeeb**  
 0303-6098695

**(xix) Proof:-**

The most important part of a theorem which uses statements and reasons in order to prove theorem is called proof.

Instructor \_\_\_\_\_  
**Rana Mujeeb**  
 0303-6098695

**(xx) Review Exercise 12:-**

1. Which of the following are true and which are false?

(i) Bisection means to divide into two equal parts. True.

(ii) Right bisection of line segment means to draw perpendicular which passes through the mid-point of line segment.

True

(iii) An point on the right bisector of a line segment is not equidistant from its end points.

False.

(iv) Any point equidistant from the end points of a line segment is on the right bisector of it. True.

(v) The right bisectors of the sides of a triangle are not concurrent. False.

(vi) The bisectors of the angles of a triangle are concurrent. True.

(vii) Any point on the bisector of an angle is not equidistant from its arms. False.

(viii) Any point inside an angle, equidistant from its arms, is on the bisector of it. True.

2. If  $\overleftrightarrow{CD}$  is right bisector of line segment  $\overline{AB}$ , then:

(i)  $m\overline{OA} = m\overline{OB}$

(ii)  $m\overline{AQ} = m\overline{BQ}$

Instructor  
Rana Jeeb  
625

4. The given triangle ABC is equilateral triangle and  $\overline{AD}$  is bisector of Angle A, then find the values.

of unknowns  $x^\circ, y^\circ$  and  $z^\circ$ .

As,

equilateral triangle is also

an equiangular triangle.

So,

$$m\angle A = m\angle B = m\angle C$$

$$\boxed{z^\circ = 60^\circ}$$

As,

$\overline{AD}$  is a bisector of  $\angle A$ .

$$\text{So, } x^\circ = y^\circ = \frac{60^\circ}{2} = 30^\circ$$

Instructor  
Ranjit jeeb  
0393-0023635

5. In the given congruent triangles

$\triangle LMO$  and  $\triangle LNO$ , find the unknowns.

$x$  and  $m$ .

As,

$$\triangle LMO \cong \triangle LNO$$

So,

$$m\overline{OM} = m\overline{ON}$$

$$\boxed{m = 12}$$

Instructor  
Ranjit jeeb  
0393-0023635

Now,

$$m\overline{LM} = m\overline{LN}$$

$$2x + 6 = 18$$

$$2x = 18 - 6$$

$$2x = 12$$

$$x = \frac{12}{2} = 6$$

$$\boxed{x = 6}$$

Instructor  
Ranjit jeeb  
0393-0023635

6.  $\overline{CD}$  is right bisector of the line segment  $\overline{AB}$ .

① If  $m\overline{AB} = 6\text{cm}$ , then find the  $m\overline{AL}$  and  $m\overline{LB}$ .

② If  $m\overline{BD} = 4\text{cm}$ , then find  $m\overline{AD}$ .

Ans,

$$m\overline{AL} = m\overline{LB} = \frac{6}{2} = 3\text{cm} \quad \because \overline{CD} \text{ is}$$

the right bisector

of  $\overline{AB}$ .

Instructor

Rana Mujeet

0303-6098695

Ans,

$m\overline{AD} = m\overline{BD} = 4\text{cm} \quad \because$  Any point on the bisector of line segment is equi-

Instructor

Rana Mujeet

0303-6098695

distant from

its end points.

Instructor  
Rana Mujeeb  
0303-6098695

## Chapter # 13

### "Sides and Angles of a Triangle"

#### Basic Concepts:-

- i) Types of Triangles.
- ii) Theorem 13.1.1.
- iii) Theorem 13.1.2.
- iv) Theorem 13.1.3.
- v) Theorem.
- vi) Theorem 13.1.4.
- vii) Corollaries.
- viii) Note.
- ix) Review Ex. 13.
- x) Some Important Concepts.

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-6098695

## i) Types of Triangles:-

### • By Sides:-

#### a) Equilateral Triangle:-

A triangle with all the sides of equal length is called equilateral triangle.

#### Example:-

Instructor  
Rana Mujeeb  
0303-6098695

Equilateral Triangle

#### b) Isosceles Triangle:-

A triangle with two sides of equal length is called isosceles triangle.

#### Example:-

Instructor  
Rana Mujeeb  
0303-6098695

Isosceles Triangle

#### c) Scalene triangle:-

A triangle with all the sides of different length is called scalene triangle.

#### Example:-

Scalene Triangle

Instructor  
Rana Mujeeb  
0303-6098695

## • By Angles:-

### a) Acute triangle / Acute-angled triangle:-

A triangle with all the interior angles measuring less than  $90^\circ$  is called acute triangle / acute-angled triangle.

Example:-

Acute  
Triangle

### b) Right triangle / Right-angled triangle:-

A triangle with one interior angle measuring  $90^\circ$  is called right triangle / right-angled triangle.

Example:-

Right  
Triangle.

### c) Obtuse triangle / Obtuse-angled triangle:-

A triangle with one interior angle measuring greater than  $90^\circ$  is called obtuse triangle / obtuse-angled triangle.

Example:-

Obtuse Triangle.

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-6098695

### ii) Theorem 13-1-1:-

If two sides of a triangle are unequal in length, the longer side has the greater measure opposite to it.

### iii) Theorem 13-1-2:-

If two angles of a triangle are unequal in measure, the side opposite to the greater angle is longer than the side opposite to the smaller angle.

Instructor  
Rana Mujeeb  
0303-6098695

### iv) Theorem 13-1-3:-

The sum of the lengths of any two sides of a triangle is greater than the length of the third side.

#### Conditions:-

- $m \overline{AB} + m \overline{AC} > m \overline{BC}$
- $m \overline{AB} + m \overline{BC} > m \overline{AC}$
- $m \overline{BC} + m \overline{AC} > m \overline{AB}$

Instructor

Rana Mujeeb

0303-6098695

### v) Theorem:-

The difference of measure of two sides of a triangle is less than the measure of third side.

#### Conditions:-

$$m\overline{AC} - m\overline{AB} < m\overline{BC}$$

$$m\overline{BC} - m\overline{AB} < m\overline{AC}$$

$$m\overline{BC} - m\overline{AC} < m\overline{AB}$$

Instructor  
Rana Mujeeb  
0303-6098695

### vi) Theorem 13.1.4:-

From a point, outside a line, the perpendicular is the shortest distance from the point to the line.

Instructor  
Rana Mujeeb  
0303-6098695

### vii) Corollaries:-

• The hypotenuse of a right-angled triangle is longer than each of the other two sides.

• In an obtuse-angled triangle, the side opposite to the obtuse angle is longer than each of the other two sides.

Instructor

Rana Mujeeb

0303-6098695

viii) Note:—

- The distance between a line and a point not on it, is the length of the perpendicular line segment from the point to the line.
- The distance between a line and a point lying on it is zero.

Instructor

Rana Mujeeb

0303-6098695

ix) Review Ex. 13:—

1. Which of the following are true and which are false?

- The angle opposite to the longer side is greater. True
- In a right-angled triangle greater angle is  $60^\circ$ . False
- In an isosceles right-angled triangle, angles other than right angle are each of  $45^\circ$ . True
- A triangle having two congruent sides is called equilateral triangle. False
- A perpendicular from a point to the line is shortest distance. True
- Perpendicular to line form an angle of  $90^\circ$ . True
- A point outside the line is collinear. False

Instructor

Instructor  
Rana Mujeeb  
0303-6098695

- Sum of two sides of triangle is greater than the third. True
- The distance between a line and a point on it is zero. True
- Triangle can be formed of lengths 2cm, 3cm and 5cm. True

**2. What will be angle for shortest distance from an outside point to the line?**

**Ans:-** From a point, outside a line, the perpendicular is the shortest distance from the point to the line.

Instructor  
Rana Mujeeb  
0303-6098695

**3. If 13cm, 12cm, and 5cm are the lengths of a triangle, then verify that difference of measure of any two sides of a triangle is less than the measure of third side.**

**Solution:-** Let,

$$a = 13\text{cm}, b = 12\text{cm}, c = 5\text{cm}$$

Now,

$$a - b < c$$

Instructor  
Rana Mujeeb  
0303-6098695

$$11-11=1 < 5$$

$$\bullet \quad b-c < a$$

$$12-5 = 7 < 13$$

$$\bullet \quad a-c < b$$

$$13-5 = 8 < 12$$

Instructor  
Rana Mujeeb  
0303-6098695

Hence proved, difference of two sides of a triangle is less than the measure of third side.

4. If 10cm, 6cm and 8cm are the lengths of a triangle, then verify that sum of measure of two sides of a triangle is greater than the third side.

Solution:- Let,

$$a = 10\text{cm}, b = 6\text{cm}, c = 8\text{cm}$$

Now,

$$\bullet \quad a+c > b$$

$$10+8 = 18 > 6$$

$$\bullet \quad b+c > a$$

$$6+8 = 14 > 10$$

$$\bullet \quad a+b > c$$

$$10+6 = 16 > 8$$

Instructor  
Rana Mujeeb  
0303-6098695

Hence proved, the sum of two sides of a triangle is greater than the measure of third side.

Instructor

Rana Mujeeb

0303-6098695

5. 3cm, 4cm, and 7cm are not the lengths of the triangle. Give the reason.

Solution:- Let,

$$a = 3\text{cm}, b = 4\text{cm}, c = 7\text{cm}$$

Now,

$$\bullet a + b > c$$

$$3 + 4 = 7 \neq 7$$

$$\bullet b + c > a$$

$$4 + 7 = 11 > 3$$

$$\bullet a + c > b$$

$$3 + 7 = 10 > 4$$

As,  $a + b \neq c$ , so, these are not the lengths of triangle.

6. If 3cm, 4cm are lengths of two sides of a right-angled triangle, then what should be the third length of the triangle. (Hint: Find Hypotenuse).

Solution:- According to Pythagoras theorem,

$$(\text{Hyp})^2 = (\text{Base})^2 + (\text{Perp})^2$$

$$(\text{Hyp})^2 = (3)^2 + (4)^2$$

$$(\text{Hyp})^2 = 9 + 16$$

$$(\text{Hyp})^2 = 25$$

Instructor

Instructor

Rana Mujeeb

0303-6098695

By taking square root on B.S,  
 $\sqrt{(\text{Hyp.})^2} = \sqrt{25}$

$$\boxed{\text{Hyp.} = 5 \text{ cm}}$$

7. Which of the following sets of lengths can be the lengths of sides of a triangle?

(a) 2cm, 3cm, 5cm

(b) 3cm, 4cm, 5cm

(c) 2cm, 4cm, 7cm

Solution:-

(a) 2cm, 3cm, 5cm

Let,

$$a = 2 \text{ cm}, b = 3 \text{ cm}, c = 5 \text{ cm}$$

Now,

$$\bullet a + b > c$$

$$2 + 3 = 5 \not> 5$$

$$\bullet b + c > a$$

$$3 + 5 = 8 > 2$$

$$\bullet a + c > b$$

$$2 + 5 = 7 > 3$$

Instructor

Rana Mujeeb

0303-6098695

As,  $a + b \not> c$ , so, these are not lengths of a triangle.

(b) 3cm, 4cm, 5cm

Let,

$$a = 3 \text{ cm}, b = 4 \text{ cm}, c = 5 \text{ cm}$$

Now,

$$\bullet a+b > c$$

$$3+4=7 > 5$$

$$\bullet b+c > a$$

$$4+5=9 > 3$$

$$\bullet a+c > b$$

$$3+5=8 > 4$$

Hence proved, these are the lengths of  
a triangle.

**(C) 2cm, 4cm, 7cm**

Let,

$$a=2\text{cm}, b=4\text{cm}, c=7\text{cm}$$

Now,

$$\bullet a+b > c$$

$$2+4=6 \neq 7$$

$$\bullet b+c > a$$

$$4+7=11 > 2$$

$$\bullet c+a > b$$

$$7+2=9 > 4$$

As,  $a+b \neq c$ , So, these are not  
the lengths of a triangle.

Instructor

Rana Mujeeb

0303-6098695

x) Some Important concepts:-

### ● Important 1:-

In a scalene triangle, the angle opposite to the largest side is of measure greater than  $60^\circ$ . (i.e., two-third of a right-angle).

Instructor  
Rana Mujeeb  
0303-6098695

### ● Important 2:-

The sum of measures of two sides of a triangle is greater than twice the measure of the median which bisects the third side.

Instructor  
Rana Mujeeb  
0303-6098695

# Chapter #14-

01

## "Ratio and Proportion"

### Basic Concepts:-

- (i) Congruent triangles.
- (ii) Similar triangles.
- (iii) Ratio.
- (iv) Proportion.
- (v) 1st and 2nd element of ratio.
- (vi) Theorem 14.1.1.
- (vii) Theorem 14.1.2.
- (viii) Theorem 14.1.3.
- (ix) Theorem 14.1.4.
- (x) Point to be noted.
- (xi) Ex 14.2 (Q1, (ii), (iii), (iv), (v)).
- (xii) Ex 14.2 (Q1 & Q2 easily).
- (xiii) Review Ex 14.

Instructor

Rana Mujeeb  
0303-6098695

Instructor

Rana Mujeeb  
0303-6098695

Instructor

Rana Mujeeb  
0303-6098695

## (i) Congruent Triangles-

02

Two triangles are said to be congruent written symbolically as,  $\cong$ , if there exists a correspondence b/w them such that all the corresponding sides and angles are congruent i.e.,

$$\text{If } \begin{cases} \overline{AB} \cong \overline{DE} \\ \overline{BC} \cong \overline{EF} \\ \overline{CA} \cong \overline{FD} \end{cases} \text{ and } \begin{cases} \angle A \cong \angle D \\ \angle B \cong \angle E \\ \angle C \cong \angle F \end{cases}$$

## (ii) Similar Triangles-

Two (or more) triangles are called similar (symbol ' $\sim$ ') if they are equiangular and measure of their corresponding sides are proportional i.e.,

In  $\triangle ABC \sim \triangle DEF$

$$\angle A \cong \angle D, \angle B \cong \angle E, \angle C \cong \angle F \text{ and}$$

$$\frac{m\overline{AB}}{m\overline{DE}} = \frac{m\overline{BC}}{m\overline{EF}} = \frac{m\overline{CA}}{m\overline{FD}}$$

**(iii) Ratio:-**

We defined ratio  $a:b = \frac{a}{b}$  as the comparison of two like quantities  $a$  and  $b$  called the terms of a ratio.

e.g.,

2:3, 3:5, etc.

Instructor

Rana Mujeeb

0303-6098695

**(iv) Proportion:-**

Equality of two ratios is defined as proportion. i.e., if  $a:b = c:d$ , then  $a, b, c$  and  $d$  are said to be in proportion.

e.g.,

2:3 = 1:4, etc.

**(v) 1st and 2nd element of ratio:-**

In a ratio.

$a:b$ ,  $a$  is called 1st element of ratio or antecedent and  $b$  is called 2nd element of ratio or consequent.

e.g.,

$\boxed{2} : \boxed{3}$  → consequent,  
antecedent

Instructor

Rana Mujeeb

0303-6098695

### (vi) Theorem 14.1.1:-

04

A line parallel to one side of a triangle and intersecting the other two sides divides them proportionally.

Instructor  
Rana Mujeeb  
0303-6098695

### (vii) Theorem 14.1.2:-

If a line segment intersects the two sides of a triangle in the same ratio, then it is parallel to the third side.

Instructor  
Rana Mujeeb  
0303-6098695

### (viii) Theorem 14.1.3:-

The internal bisector of an angle of a triangle divides the side opposite to it in the ratio of the lengths of the

sides containing the angle.

25

Instructor  
**Rana Mujeeb**  
0303-6098695

### (ix) Theorem 14.1.4:-

If two triangles are similar, then the measures of their corresponding sides are proportional.

$\triangle ABC \sim \triangle DEF$

Instructor  
**Rana Mujeeb**  
0303-6098695

i.e.,  $\angle A \cong \angle D$ ,  $\angle B \cong \angle E$ ,  $\angle C \cong \angle F$

### (x) Point to be Noted:-

- Two points determine a line and three non-collinear points determine a plane.
  - A line segment has exactly one midpoint.
  - If two intersecting lines form equal adjacent angles, the lines are perpendicular.
  - Two congruent triangles are similar also.
- But two similar triangles are not necessarily congruent, as congruence of their corresponding sides is not necessary.

(x1) Ex 14.1

Q1:- In  $\triangle ABC$ ,  $\overline{DE} \parallel \overline{BC}$ ,

① If  $m\overline{AD} = 1.5\text{cm}$ ,  $m\overline{BD} = 3\text{cm}$ ,  $m\overline{AE} = 1.3\text{cm}$   
then find  $m\overline{CE}$ .

Let,

$$m\overline{CE} = x$$

Now,

$$m\overline{AD} : m\overline{BD} = m\overline{AE} : m\overline{CE}$$

$$1.5 : 3 = 1.3 : x$$

$$\frac{1.5}{3} = \frac{1.3}{x}$$

$$1.3 \times 3 = 1.5x$$

$$3.9 = 1.5x$$

$$\frac{3.9}{1.5} = x$$

$$x = 2.6\text{cm}$$

Instructor

**Rana Mujeeb**

0303-6098695

② If  $m\overline{AD} = 2.4\text{cm}$ ,  $m\overline{AE} = 3.2\text{cm}$ ,  $m\overline{EC} = 4.8\text{cm}$   
then find  $m\overline{AB}$ .

Let,

$$m\overline{AB} = x$$

Now,

$$m\overline{AD} : m\overline{AE} = m\overline{DB} : m\overline{EC}$$

$$2.4 : 3.2 = m\overline{DB} : 4.8$$

$$\frac{2.4}{3.2} = \frac{m\overline{DB}}{4.8}$$

Instructor

**Rana Mujeeb**

0303-6098695

$$2.4 \times 4.8 = m\overline{BD} \times 3.2$$

$$11.52 = m\overline{BD} \times 3.2$$

$$\frac{11.52}{3.2} = m\overline{BD}$$

$$m\overline{BD} = 3.6 \text{ cm}$$

Instructor

Rana Mujeeb

0303-6098695

So,

$$m\overline{AB} = m\overline{AD} + m\overline{DB}$$

$$x = 2.4 + 3.6$$

$$x = 6 \text{ cm}$$

Q. If  $\frac{m\overline{AD}}{m\overline{DB}} = \frac{3}{5}$  and  $m\overline{AC} = 4.8 \text{ cm}$  then find  $m\overline{AE}$ .

Let,

$$m\overline{AE} = x$$

Now,

$$m\overline{AD} : m\overline{DB} = m\overline{AE} : m\overline{EC}$$

$$3 : 5 = x : m\overline{AC} - m\overline{AE}$$

$$\frac{3}{5} = x : 4.8 - x$$

$$\frac{3}{5} = \frac{x}{4.8 - x}$$

Instructor

Rana Mujeeb

0303-6098695

$$3(4.8 - x) = 5x$$

$$14.4 - 3x = 5x$$

$$14.4 = 3x + 5x$$

$$14.4 = 8x$$

$$x = \frac{14.4}{8}$$

$$x = 1.8 \text{ cm}$$

Instructor

Rana Mujeeb

0303-6098695

08

iv) If  $m\overline{AD} = 2.4 \text{ cm}$ ,  $m\overline{AE} = 3.2 \text{ cm}$ ,  $m\overline{DE} = 2 \text{ cm}$ ,  $m\overline{BC} = 5 \text{ cm}$  then find  $m\overline{AB}$ .

Let,

$$m\overline{AB} = x, m\overline{DB} = y, m\overline{AC} = z,$$

$$m\overline{CE} = m.$$

Now,

$$\triangle ADE \sim \triangle ABC$$

$$\frac{m\overline{AD}}{m\overline{AB}} = \frac{m\overline{DE}}{m\overline{BC}} = \frac{m\overline{AE}}{m\overline{AC}}$$

$$\frac{2.4}{x} = \frac{2}{5} = \frac{3.2}{z}$$

Instructor

Rana Mujeeb

0303-6098695

$$\frac{2.4}{x} = \frac{2}{5}$$

and

$$\frac{2}{5} = \frac{3.2}{z}$$

$$2.4 \times 5 = 2x$$

and

$$2x \times z = 3.2 \times 5$$

$$12 = 2x$$

and

$$2z = 16$$

$$\frac{12 \times 6}{x} = x$$

and

$$z = \frac{16 \times 8}{z}$$

$$x = 6 \text{ cm}$$

and

$$z = 8 \text{ cm}$$

Here,

$$y = m\overline{AB} - m\overline{AD}$$

$$y = 6 - 2.4$$

$$y = 3.6 \text{ cm}$$

Instructor

Rana Mujeeb

$$m = m\overline{AC} - m\overline{AE}$$

$$m = 8 - 3 = 2$$

$$m = 4.8 \text{ cm}$$

Instructor

Rana Mujeeb

0303-6098695

⑦ If  $m\overline{AD} = 4x - 3$ ,  $m\overline{AE} = 8x - 7$ ,  $m\overline{BD} = 3x - 1$  and  $m\overline{CE} = 5x - 3$ , find value of  $x$ .

As,

$$m\overline{AD} : m\overline{AE} = m\overline{DB} : m\overline{CE}$$

$$4x - 3 : 8x - 7 = 3x - 1 : 5x - 3$$

$$\frac{4x - 3}{8x - 7} = \frac{3x - 1}{5x - 3}$$

$$(4x - 3)(5x - 3) = (8x - 7)(3x - 1)$$

$$20x^2 - 12x - 15x + 9 = 24x^2 - 8x - 21x + 7$$

$$20x^2 - 27x + 9 = 24x^2 - 29x + 7$$

$$0 = 24x^2 - 29x + 7 - 20x^2 + 27x - 9$$

$$0 = 4x^2 - 2x - 2$$

$$4x^2 - 2x - 2 = 0$$

$$4x^2 - 4x + 2x - 2 = 0$$

$$4x(x - 1) + 2(x - 1) = 0$$

$$(x - 1)(4x + 2) = 0$$

$$x - 1 = 0$$

$$x = 1$$

Instructor

Rana Mujeeb

0303-6098695

$$4x + 2 = 0$$

$$4x = -2$$

$$x = -2/4$$

$$x = -\frac{1}{2}$$

$x = -\frac{1}{2}$  is not possible

So,

$$x = 1$$

(xii) Ex 14.2:-

Q1:- In  $\triangle ABC$  as shown in the figure,  $\overrightarrow{CD}$  bisects  $\angle C$  and meets  $\overline{AB}$  at  $D$  is equal to

(a) 5 (b) 46 (c) 10 (d) 18

Let,

$$m \overline{BD} = x$$

Now,

$$m \overline{AD} : m \overline{BD} = m \overline{AC} : m \overline{BC}$$

$$6 : x = 12 : 10$$

$$\frac{6}{x} = \frac{12}{10}$$

$$6 \times 10 = 12x$$

$$60 = 12x$$

$$\frac{60}{12} = x$$

$$x = 5 \text{ cm}$$

So,

$m \overline{BD}$  is equal to option '(a)'.

Instructor

Rana Mujeeb

0303-6098695

Q2:- In  $\triangle ABC$  shown in the figure,  $\overrightarrow{CD}$  bisects  $\angle C$ . If  $m \overline{AC} = 3$ ,  $m \overline{CB} = 6$  and  $m \overline{AB} = 7$ , then find  $m \overline{AD}$  and  $m \overline{DB}$ .

Let,

$$m\overline{AD} = x$$

Now,

$$m\overline{AD} : m\overline{DB} = m\overline{AC} : m\overline{CB}$$

$$x : 7 - x = 3 : 6$$

$$\frac{x}{7-x} = \frac{3}{6}$$

$$6x = 3(7-x)$$

$$6x = 21x - 3x$$

$$6x + 3x = 21$$

$$9x = 21$$

$$x = \frac{21}{9}$$

$$x = \frac{7}{3}$$

$$m\overline{AD} = \frac{7}{3}$$

$$m\overline{DB} = 7 - \frac{7}{3}$$

$$m\overline{DB} = \frac{21-7}{3}$$

$$m\overline{DB} = \frac{14}{3}$$

Review Ex 14

Q1:- Which one of the following are true and which are false?

● Congruent triangles are of same

- size and shape. True
- Similar triangles are of same shape but different sizes. True
  - Symbol used for congruent is ' $\cong$ '. True
  - Symbol used for similarity is ' $\sim$ '. True
  - Congruent triangles are similar. True
  - Similar triangles are congruent. False
  - A line segment has only one mid-point. True
  - One and only one line can be drawn through two points. True
  - Proportion is non-equality of two ratios. False
  - Ratio has no unit True

**Q3:-** In  $\triangle LMN$  shown in figure  $\overline{MN} \parallel \overline{PQ}$ .

① If  $m\overline{LM} = 5\text{cm}$ ,  $m\overline{LP} = 2.5\text{cm}$ ,  $m\overline{LQ} = 2.3\text{cm}$  then find  $m\overline{LN}$

Let,

$$m\overline{LN} = x$$

Now,

$$m\overline{LM} : m\overline{LP} = m\overline{LN} : m\overline{LQ}$$

$$5 : 2.5 = x : 2.3$$

$$\frac{5}{2.5} = \frac{x}{2.3}$$

$$5 \times 2.5 = 2.5x$$

$$11.5 = 2.5x$$

$$\frac{11.5}{2.5} = x$$

$$x = 4.6 \text{ cm}$$

Instructor

Rana Mujeeb

0303-6098695

Q If  $m\overline{LM} = 6 \text{ cm}$ ,  $m\overline{LQ} = 2.5 \text{ cm}$ ,  $m\overline{QN} = 5 \text{ cm}$  then find  $m\overline{LP}$ .

Let,

$$m\overline{LP} = x$$

Now, ...

$$m\overline{LM} : m\overline{LP} = m\overline{LN} : m\overline{LQ}$$

$$6 : x = m\overline{LQ} + m\overline{QN} : 2.5$$

$$6 : x = 2.5 + 5 : 2.5$$

$$6 : x = 7.5 : 2.5$$

$$\frac{6}{x} = \frac{7.5}{2.5}$$

$$6 \times 2.5 = 7.5x$$

$$15 = 7.5x$$

$$\frac{15}{7.5} = x$$

$$x = 2 \text{ cm}$$

Instructor

Rana Mujeeb

0303-6098695

Q4:- In the shown figure, Let  $m\overline{PA} = 8x - 7$ ,  $m\overline{PB} = 4x - 3$ ,  $m\overline{AR} = 5x - 3$ ,  $m\overline{BR} = 3x - 1$ , then find value of  $x$

if  $\overline{AB} \parallel \overline{QR}$ .

As,

$$m\overline{PA} : m\overline{PB} = m\overline{AQ} : m\overline{BR}$$

$$8x-7 : 4x-3 = 5x-3 : 3x-1$$

$$\frac{8x-7}{4x-3} = \frac{5x-3}{3x-1}$$

$$(8x-7)(3x-1) = (4x-3)(5x-3)$$

$$24x^2 - 8x - 21x + 7 = 20x^2 - 12x - 15x + 9$$

$$24x^2 - 29x + 7 = 20x^2 - 27x + 9$$

$$24x^2 - 29x + 7 - 20x^2 + 27x - 9 = 0$$

$$4x^2 - 2x - 2 = 0$$

$$4x^2 - 4x + 2x - 2 = 0$$

$$4x(x-1) + 2(x-1) = 0$$

$$(x-1)(4x+2) = 0$$

$$x-1 = 0$$

$$\boxed{x = 1}$$

Instructor

0303-6098695

Q6:- In Isosceles  $\triangle PQR$  shown in figure, find the value of  $x$  and  $y$ .

Instructor  
Rana Mujeeb  
0303-6098695

اس سوال کو حل کرنے کے دو طریقے ہیں۔

### ● Method I:-

Statements

$$m\overline{PR} = m\overline{PQ}$$

$$x = 10 \text{ cm}$$

Now,

$$\triangle PQL \leftrightarrow \triangle PLR$$

$$m\overline{PQ} \cong m\overline{PR}$$

$$m\overline{PL} \cong m\overline{PL}$$

$$\triangle PQL \cong \triangle PLR$$

So

$$y = 6 \text{ cm}$$

Reasons

$\therefore$  Isosceles triangle

Hypotenuse

Common

$$H.S \cong H.S$$

Instructor

Rana Mujeeb

0303-6098695

### ● Method II:-

$$m\overline{PR} = m\overline{PQ}$$

$$x = 10 \text{ cm}$$

$\therefore$  Isosceles triangles

In  $\triangle PQL$ ,

$$(\text{Hyp})^2 = (\text{Base})^2 + (\text{Perp})^2$$

$$(10)^2 = (6)^2 + (\text{Perp})^2$$

Instructor

Rana Mujeeb

0303-

$$100 = 36 + (\text{Prep})^2$$

$$100 - 36 = (\text{Prep})^2$$

$$\sqrt{64} = \sqrt{(\text{Prep})^2}$$

$$\boxed{\text{Prep} = 8 \text{ cm}}$$

In  $\triangle PQR$ ,

$$(\text{Hyp})^2 = (\text{Base})^2 + (\text{Perp})^2$$

$$(10)^2 = (y)^2 + (8)^2$$

$$100 = y^2 + 64$$

$$100 - 64 = y^2$$

$$\sqrt{36} = \sqrt{y^2}$$

$$\boxed{y = 6 \text{ cm}}$$

## Chapter No 15:-

### "Pythagoras' theorem"

Instructor  
Rana Mujeeb  
0303-6098695

#### Basic Concepts:-

- i) Right-angled triangle.
  - ii) Pythagoras theorem.
  - iii) Converse of pythagoras theorem.
  - iv) Corollary.
  - v) Ex 15 (Q1, Q2, Q6(a), Q7, Q8)
  - vi) Review Exercise 15
- 

Instructor  
Rana Mujeeb  
0303-6098695

## (i) Right-angled triangle:-

A triangle with one interior angle is measuring  $90^\circ$  is called right-angled triangle.

e.g.,

Instructor  
Rana Mujeeb  
03-6098693

## (ii) Pythagoras theorem:-

In a right-angled triangle, the square of the length of hypotenuse is equal to the sum of the squares of the lengths of other two sides.

Formula:-

$$c^2 = a^2 + b^2$$

Instructor  
Rana Mujeeb  
0303-6098693

## (iii) Converse of pythagoras theorem:-

If the square of one side of a triangle is equal to the sum of the squares of the other two sides, then the triangle is a right angled triangle.

### Formula:-

$$a^2 + b^2 = c^2$$

### (iv) Corollary:-

Let "c" be the longest side "a, b and c" of a triangle.

- If  $a^2 + b^2 = c^2$ , then triangle is right.
- If  $a^2 + b^2 > c^2$ , then triangle is acute.
- If  $a^2 + b^2 < c^2$ , then triangle is obtuse.

### Ex. 15

1- Verify that the  $\Delta$ s having the following measures of sides are right-angled.

(i)  $a = 5\text{cm}$ ,  $b = 12\text{cm}$ ,  $c = 13\text{cm}$

According to Pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(13)^2 = (5)^2 + (12)^2$$

$$169 = 25 + 144$$

Instructor  
Rana Mujeeb  
0303-6098695

169-169

Hence, it is a right-angled triangle.

(iv)  $a = 1.5 \text{ cm}$ ,  $b = 2 \text{ cm}$ ,  $c = 2.5 \text{ cm}$

According to Pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(2.5)^2 = (1.5)^2 + (2)^2$$

$$6.25 = 2.25 + 4$$

$$6.25 = 6.25$$

Instructor  
Rana Mujeeb  
0303-6098695

Hence, it is a right-angled triangle.

(iii)  $a = 9 \text{ cm}$ ,  $b = 12 \text{ cm}$ ,  $c = 15 \text{ cm}$

According to Pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(15)^2 = (9)^2 + (12)^2$$

$$225 = 81 + 144$$

$$225 = 225$$

Instructor  
Rana Mujeeb  
0303-6098695

Hence, it is a right-angled triangle.

(v)  $a = 16 \text{ cm}$ ,  $b = 30 \text{ cm}$ ,  $c = 34 \text{ cm}$

According to Pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(34)^2 = (16)^2 + (30)^2$$

$$1156 = 256 + 900$$

$$1156 = 1156$$

Instructor  
Rana Mujeeb  
0303-6098695

Hence, it is a right-angled triangle.

2:- Here,

$$\text{Hyp.} = c = a^2 + b^2$$

$$\text{Perp.} = b = 2ab$$

$$\text{Base} = a = a^2 - b^2$$

Instructor  
Rana Mujeeb  
0303-6098695

According to pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(a^2 + b^2)^2 = (a^2 - b^2)^2 + (2ab)^2$$

$$(a^2)^2 + (b^2)^2 + 2(a^2)(b^2) = (a^2)^2 + (b^2)^2 - 2(a^2)(b^2) + 4a^2b^2$$

$$a^4 + b^4 + 2a^2b^2 = a^4 + b^4 - 2a^2b^2 + 4a^2b^2$$

$$a^4 + b^4 + 2a^2b^2 = a^4 + b^4 + 2a^2b^2$$

Hence, it is a right-angled triangle.

3:- Here,

$$\text{Base} = a = x$$

$$\text{Perp.} = b = 8$$

$$\text{Hyp.} = c = 17$$

By pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(17)^2 = (x)^2 + (8)^2$$

$$289 = x^2 + 64$$

$$289 - 64 = x^2$$

$$\sqrt{225} = \sqrt{x^2}$$

$$x = 15$$

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-6098695

Q6:-

(ii) Find value of " $x$ "?

In  $\triangle ADC$ ,

Base -  $a = 5 \text{ cm}$

perp =  $b = ?$

Hyp =  $c = 13 \text{ cm}$

By pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(13)^2 = (5)^2 + b^2$$

$$169 = 25 + b^2$$

$$169 - 25 = b^2$$

$$\sqrt{144} = \sqrt{b^2}$$

$$b = 12 \text{ cm}$$

Instructor  
Rana Mujeeb  
0303-6098695

In  $\triangle ABD$ ,

Base =  $a = x$

Perp =  $b = 12 \text{ cm}$

Hyp =  $c = 15 \text{ cm}$

By pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(15)^2 = (x)^2 + (12)^2$$

$$225 = x^2 + 144$$

$$225 - 144 = x^2$$

$$\sqrt{81} = \sqrt{x^2}$$

$$x = 9 \text{ cm}$$

Instructor  
Rana Mujeeb  
0303-6098695

7:-

Here,

$$\text{Base} = a = 500\text{m}$$

$$\text{Prep} = b = 300\text{m}$$

$$\text{Hyp} = c = x$$

By pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(x)^2 = (500)^2 + (300)^2$$

$$x^2 = 250000 + 90000$$

$$\sqrt{x^2} = \sqrt{340000}$$

$$x = \sqrt{34 \times 10000}$$

$$x = 100\sqrt{34}$$

Instructor  
Rana Mujeeb  
0303-6098695

8:- Here,

$$\text{Base} = a = 8\text{m}$$

$$\text{Prep} = b = x$$

$$\text{Hyp} = c = 17\text{m}$$

By pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(17)^2 = (8)^2 + (x)^2$$

$$289 = 64 + x^2$$

$$289 - 64 = x^2$$

$$\sqrt{225} = \sqrt{x^2}$$

$$x = 15\text{m}$$

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-6098695

(vi) Review Exercise 15

1- Which of the following are true and which are not?

- (i) In a right-angled triangle greater angle is  $90^\circ$ . True.
- (ii) In a right-angled triangle right angle is  $60^\circ$ . False.
- (iii) In a right-angled triangle hypotenuse is a side opposite to right angle. True.
- (iv) If  $a, b, c$  are sides of right-angled triangle with  $c$  as longer side, then  $c^2 = a^2 + b^2$ . True.
- (v) If 3cm and 4cm are two sides of a right-angled triangle, then hypotenuse is 5cm. True.
- (vi) If hypotenuse of an isosceles right triangle is  $\sqrt{2}$  cm, then each of other side is of length 2cm. False.

2- Find the unknown value in each of the following figures.

According to pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(x)^2 = (3)^2 + (4)^2$$

$$x^2 = 9 + 16$$

$$\sqrt{x^2} = \sqrt{25}$$

$$x = 5 \text{ cm}$$

Instructor  
Rana Mujeeb  
0303-6098695

(ii)

According to pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(10)^2 = (x)^2 + (6)^2$$

$$100 = x^2 + 36$$

$$100 - 36 = x^2$$

$$\sqrt{64} = \sqrt{x^2}$$

$$x = 8 \text{ cm}$$

Instructor  
Rana Mujeeb  
0303-6098695

(iii)

Instructor  
Rana Mujeeb  
0303-6098695

According to pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(13)^2 = (5)^2 + (x)^2$$

$$169 = 25 + x^2$$

$$169 - 25 = x^2$$

$$\sqrt{144} = \sqrt{x^2}$$

$$x = 12 \text{ cm}$$

Instructor  
Rana Mujeeb  
0303-6098695

(iv)

According to pythagoras theorem,

$$c^2 = a^2 + b^2$$

$$(12)^2 = (1)^2 + (x)^2$$

$$144 = 1 + x^2$$

$$144 - 1 = x^2$$

$$\sqrt{143} = \sqrt{x^2}$$

$$x = 1 \text{ cm}$$

Chapter # 16-  
"Theorem Related  
with Area."

Basic Concepts:-

- (i) Area of a figure.
- (ii) Interior of triangle.
- (iii) Triangular Region.
- (iv) Congruent Area Axiom.
- (v) Rectangular Region.
- (vi) Interior of Rectangle.
- (vii) Altitude of triangle.
- (viii) Altitude of parallelogram.
- (ix) Area of square.
- (x) Area of rectangle.
- (xi) Area of parallelogram.
- (xii) Area of triangle.
- (xiii) Important points.
- (xiv) Review Exercise 16.

Instructor  
Rana Mujeeb  
0303-6098695

### (i) Area of a figure:-

The region enclosed by the bounding lines of a closed figure is called area of a figure. The area of a closed region is expressed in square units (say, sq m,  $m^2$ ) i.e., a positive real number.

Instructor  
Rana Mujeeb  
0303-6098695

### (ii) Interior of triangle:-

The interior of a triangle is the part of the plane enclosed by the triangle.  
e.g.,

Instructor  
Rana Mujeeb  
0303-6098695

### (iii) Triangular Region:-

A triangular region is the union of a triangle and its interior i.e., the three line segments forming the triangle and its interior.

(iv) Congruent Area Axiom:-If  $\triangle ABC \cong \triangle PQR$ ,

then area of (region  $\triangle ABC$ ) = area of (region  $\triangle PQR$ ).

(v) Rectangular Region:-

A rectangular

region is the union of a rectangle and its interior.

e.g.,

Instructor

Rana Mujeeb

0303-6098695

(vi) Interior of Rectangle:-

The interior

of a rectangle is the part of the plane enclosed by the rectangle

e.g.,

Instructor

Rana Mujeeb

0303-6098695

(vii) Altitude of a triangle:-

If one side

of a triangle is taken as its base, the perpendicular to that side,

from the opposite vertex is called the altitude or height of a triangle.

e.g.,

### viii) Altitude of a Parallelogram:-

If one side of a parallelogram is taken as its base, the perpendicular distance between that side and the side parallel to it, is called altitude or height of a parallelogram.

e.g.,

Instructor  
Rana Mujeeb  
0303-6098695

### (ix) Area of a square:-

The region enclosed by the bounding lines of a square is called the area of square.

In a square,  
Area of a square = Side  $\times$  Side.

Instructor  
Rana Mujeeb  
0303-6098695

**(x) Area of a rectangle:-**

The region enclosed by the bounding lines of a rectangle is called the area of rectangle.

In a rectangle,

$$\text{Area of rectangle} = \text{Length} \times \text{Width}.$$

**(xi) Area of a triangle:-**

The region enclosed by the bounding lines of a triangle is called the area of triangle.

In a triangle,

$$\text{Area of triangle} = \frac{1}{2} \times \text{Base} \times \text{Altitude}$$

**(xii) Area of parallelogram:-**

The region enclosed by the bounding lines of a parallelogram is called the area of parallelogram.

In a parallelogram,

$$\text{Area of parallelogram} = \text{Base} \times \text{Altitude}.$$

Instructor

Rana Mujeeb

0303-6098695

### (xii) Important points:-

- Parallelograms on the same base and between the same parallel lines (or of the same altitude) are equal in area.
- Parallelograms on the equal bases and having the same (or equal) altitude are equal in area.
- Triangles on the same base and of the same (i.e., equal) altitudes are 'equal' in area.
- Triangles on equal bases and of equal altitudes are equal in area.

Instructor

Ranjit Mujee

0303-609363

### (xiv) Review Exercise 16:-

1:- Which one of the following are true and which are false?

- i) Area of a figure means region enclosed by bounding lines of closed figure. True
- ii) Similar figures have same area. False
- iii) Congruent figures have same area. True
- iv) A diagonal of a parallelogram divides it into two non-congruent triangles. False

Altitude of a triangle means perpendicular from vertex to the opposite side (base). True.

Area of a parallelogram is equal to the product of base and height. True.

2:- Find area of the following:-

(i)

Instructor  
Rana Mujeeb  
0303-6098695

As we know that,

Area of rectangle = Length  $\times$  Width

$$= (6) (3)$$

$$= 18 \text{ cm}^2$$

(ii)

Instructor  
Rana Mujeeb  
0303-6098695

As we know that,

Area of square = side  $\times$  side

$$= 4 \times 4$$

$$= 16 \text{ cm}^2$$

(iv)

Instructor  
Rana Mujeeb  
0303-6098695

As we know that,

Area of parallelogram = Base  $\times$  Altitude

$$= 8 \times 4$$

$$= 32 \text{ cm}^2$$

(v)

Instructor  
Rana Mujeeb  
0303-6098695

As we know that,

Area of triangle =  $\frac{1}{2} \times$  Base  $\times$  Altitude

$$= \frac{1}{2} \times 16 \times 10$$

$$= 80 \text{ cm}^2$$

# Chapter No 17:-

## "Practical Geometry

### —Triangles—

Instructor

Rana Mujeeb

0303-6098695

Instructor

Rana Mujeeb

0303-6098695

## Basic Concepts

- i) Angle Bisector.
- ii) Perpendicular Bisector.
- iii) Median.
- iv) Altitude.
- v) Concurrent Lines & Point of concurrency
- vi) Centroid.
- vii) Incentre.
- viii) Orthocentre.
- ix) Circum-Centre.
- x) Observe that.
- xi) Ex 17.1 (complete).
- xii) Ex 17.2 (complete).
- xiii) Ex 17.3 (Q1 & Q2 Only).
- xiv) Review Ex 17.

Instructor

Rana Mujeeb

0303-6098695

## i) Angle Bisector:-

02

Angle bisector is the ray which divides an angle into two equal parts.

## ii) Perpendicular Bisector:-

A line  $l$  is called perpendicular bisector of line segment if  $l$  is perpendicular to the line segment and passes through its mid-point.

Instructor  
Rana Majeed  
0303-6098695

Instructor  
Rana Majeed  
0303-6098695

### iii) Median:-

03

A line segment joining a vertex of a triangle to the mid-point of the opposite side is called median of a triangle.

### iv) Altitude:-

A line segment from a vertex of a triangle, perpendicular to the line containing opposite side, is called altitude of the  $\Delta$ .

## v) Concurrent lines & Point of concurrency:

Three or more than three lines are said to be concurrent, if they all pass through the same point. The common point is called point of concurrency.

Instructor  
Rana Majeed  
0303-6098695

Here, P is a point of concurrency.

## vi) Centroid:-

The point where the three medians of  $\Delta$  meet is called centroid of  $\Delta$ .

### Location:-

It is always inside the  $\Delta$ .

### Figure:-

Instructor  
Rana Majeed  
0303-6098695

## vii) Incentre:-

05

The internal bisector of the angles of  $\Delta$  meet at a point called incentre of  $\Delta$ .

### Location:-

It is always inside the  $\Delta$ .

### Figure:-

Instructor  
Rana Mujeeb  
0303-6098695

## viii) Orthocentres:-

The point of concurrency of the three altitudes of  $\Delta$  is called its orthocentre.

### Location:-

- In Acute  $\Delta$ , it is inside.
- In Right  $\Delta$ , it is at Hypotenuse.
- In Obtuse  $\Delta$ , it is outside.

### Figure:-

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-6098695

## ii) Circumcentre:-

The point of concurrency of the perpendicular bisectors of the sides of a  $\Delta$  is called circumcentre of  $\Delta$ .

### Location:-

In Acute  $\Delta$ , it is inside.

In Right  $\Delta$ , it is at Hypotenuse.

In Obtuse  $\Delta$ , it is outside.

### Figure:-

Instructor  
Ranjit M. Jeet  
0303-6038695

Instructor  
Ranjit M. Jeet  
0303-6038695

### x) Observe that:-

$\Delta$ s  $APC$ ,  $ADC$  stand on the same base  $AC$  and b/w the same parallels  $AC$  and  $PD$ .

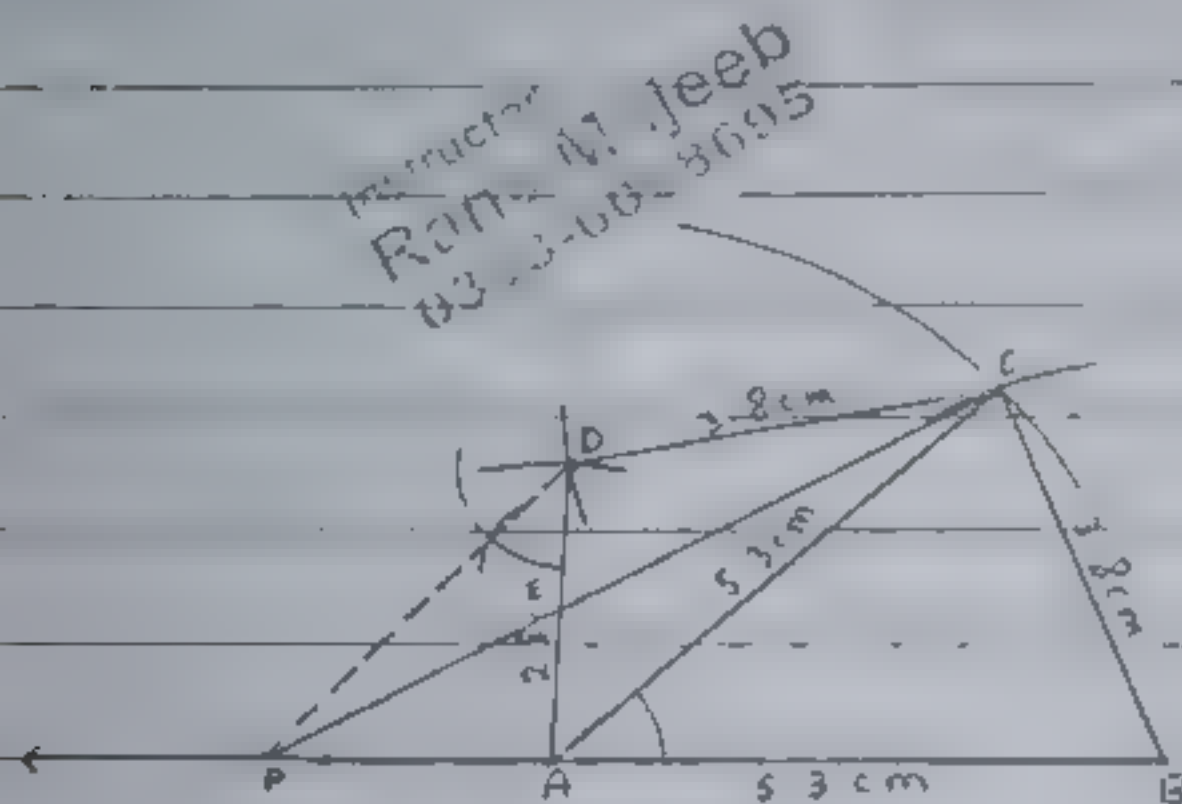

$$\text{Hence } \Delta APC = \Delta ADC$$

$$\Delta APC + \Delta ABC = \Delta ADC + \Delta ABC \text{ or } \Delta PBC = \text{quadrilateral } (ABCD)$$

1.

(i). Construct a quadrilateral  $ABCD$ , having  $m\overline{AB} = m\overline{AC} = 5.3\text{ cm}$ ,  $m\overline{BC} = m\overline{CD} = 3.8\text{ cm}$  and  $m\overline{AD} = 2.8\text{ cm}$ .

(ii). On the side  $BC$  construct a  $\Delta$  equal in area to the quadrilateral  $ABCD$ .

### Construction:-

- (i) Draw a line segment  $m\overline{AB} = 5.3\text{ cm}$
- (ii) Draw an arc of radius  $5.3\text{ cm}$  with centre  $A$  and draw an arc of radius  $3.8\text{ cm}$  with centre  $B$ .

- (iii) These two arcs cut each other at point C. Join C to A & C to B.
- (iv) Draw an arc of radius 3.8cm with centre C and draw an arc of radius 2.8cm with centre A.
- (v) These two arcs cut each other at point D. Join D to C and D to A to complete quadrilateral ABCD.
- (vi) Through D, draw  $DP \parallel AC$ , meeting BA produced at P.
- (vii) Join P to C.

Hence  $\triangle PBC$  is required  $\Delta$  and its area is equal to quadrilateral ABCD.

Instructor  
Rana Mujeeb  
0303-609860

xiv)

## Review Ex 17

1. Fill in the blanks to make statement true.

(i) The side of a right angled triangle opposite to  $90^\circ$  is called Hypotenuse.

(ii) The line segment joining a vertex of triangle to mid-point of its opposite side is called a median.

- (iv) A line drawn from a vertex of a triangle which is Perpendicular to its opposite side is called an altitude of triangle.
- (v) The bisector of three angles of a triangle are concurrent.
- (vi) The point of concurrency of the right bisectors of the three sides of the triangle is equidistant from its vertices.
- (vii) Two or more triangles are said to be similar if they are equiangular and measures of their corresponding sides are Proportional.
- (viii) The altitudes of a right triangle are concurrent at the Vertex of the right angle.

## 2. Multiple Choice Questions.

Choose the correct answer.

- (i) A  $\Delta$  having two sides congruent is called
  - (a) scalene
  - (b) right angled
  - (c) equilateral
  - (d) ☒ isosceles.

(ii) A quadrilateral having each angle of  $90^\circ$  is called \_\_\_\_\_.

(a) parallelogram

(b) rectangle

(c) trapezium

(d) rhombus

(iii) The right bisectors of the three sides of a triangle are \_\_\_\_\_.

(a) congruent

(b) collinear

(c) concurrent

(d) parallel

(iv) The \_\_\_\_\_ altitudes of an isosceles triangle are congruent.

(a) two

(b) three

(c) four

(d) none.

Instructor

Rana Mujib

0303-609860

(v) A point equidistant from the end points of a line-segment is on its \_\_\_\_\_.

(a) bisector

(b) right bisector

(c) perpendicular

(d) median

(vi) \_\_\_\_\_ congruent triangles can be made by joining the mid-points of the sides of a triangle.

(a) three

(b) four

(c) five

(d) two

Instructor

Rana Mujib

0303-609860

(vii) The diagonal of a parallelogram \_\_\_\_\_ each other.

☒ (a) bisect

☐ (b) trisect

☐ (c) bisect at right angle

☐ (d) none of these

(viii) The medians of a triangle cut each other in the ratio \_\_\_\_\_.

☐ (a) 4:1

☐ (b) 3:1

Instructor

☒ (c) 2:1

☐ (d) 1:1

Rana Muje

0303-6098695

(ix) One angle on the base of an isosceles triangle is  $30^\circ$ . What is the measure of its vertex angle

☐ (a)  $30^\circ$

Instructor

☐ (b)  $60^\circ$

Rana Mujeeb

☐ (c)  $90^\circ$

0303-6098695

☒ (d)  $120^\circ$

(x) If the three altitudes of a triangle are congruent, then the triangle is \_\_\_\_\_.

☒ (a) equilateral

☐ (b) right angled

☐ (c) isosceles

☐ (d) acute angled

(xi) If two medians of a triangle are congruent then the triangle is \_\_\_\_\_.

☒ (a) isosceles

☐ (b) equilateral

Instructor

Rana Muje

0303-6098695

☐ (c) right angled

☐ (d) acute angled

xi)

## Ex 17.1

1. Construct  $\Delta ABC$ , in which  
 (i)  $m\overline{AB} = 3.2\text{ cm}$ ,  $m\overline{BC} = 4.2\text{ cm}$ ,  $m\overline{CA} = 5.2\text{ cm}$

Instructor  
 Rana Mujeeb  
 0303-6038695

Instructor

Rana Mujeeb

0303-6038695

**Construction:-**

- (i) Draw a line segment  $m\overline{CA} = 5.2\text{ cm}$
- (ii) Draw an arc of radius  $4.2\text{ cm}$  and draw an arc of radius  $3.2\text{ cm}$ .
- (iii) These two arcs intersect each other at a point B.
- (iv) Join B to C and B to A.

Hence,  $\Delta ABC$  is required  $\Delta$ .

(ii)  $m\overline{AB} = 4.2\text{cm}$ ,  $m\overline{BC} = 3.9\text{cm}$ ,  $m\overline{CA} = 3.6\text{cm}$

Instructor  
Rana Mujeeb  
0303-6098695

## Construction:-

- (i) Draw a line segment  $m\overline{AB} = 4.2\text{cm}$  with centre B
  - (ii) Draw an arc of radius  $3.9\text{cm}$  and centre A.  
draw an arc of radius  $3.6\text{cm}$  with
  - (iii) These two arcs intersect each other at a point C.
  - (iv) Join C to A & C to B.
- Hence,  $\triangle ABC$  is required  $\triangle$ .

Instructor  
Rana Mujeeb  
0303-6098695

(iii)  $m\overline{AB} = 4.8\text{cm}$ ,  $m\overline{BC} = 3.7\text{cm}$ ,  $m\angle B = 60^\circ$

Instructor  
Rana Mujeeb  
0303-6098695

## Construction:-

- (i) Draw a line segment  $m\overline{AB} = 4.8\text{cm}$
- (ii) Make an angle of  $m\angle B = 60^\circ$
- (iii) Draw an arc of radius  $3.7\text{cm}$  with centre B.
- (iv) Join C to A.

Hence,  $\triangle ABC$  is required  $\triangle$ .

- (iv)  $m\overline{AB} = 3\text{cm}$ ,  $m\overline{AC} = 3.2\text{cm}$ ,  $m\angle A = 45^\circ$**

## Construction:-

- (i) Draw a line segment  $m\overline{AC} = 3.2\text{cm}$
- (ii) Make an angle of  $m\angle A = 45^\circ$
- (iii) Draw an arc of radius  $3\text{cm}$  with centre A.
- (iv) Join B to C.

Hence,  $\triangle ABC$  is a required  $\triangle$ .

Instructor  
Rana Mujeeb  
0303-6098695

Q)  $m\overline{BC} = 4.2\text{cm}$ ,  $m\overline{CA} = 3.5\text{cm}$ ,  $m\angle C = 75^\circ$

### Construction:-

- (i) Draw a line segment  $m\overline{BC} = 4.2\text{cm}$
- (ii) Make an angle of  $m\angle C = 75^\circ$
- (iii) Draw an arc of radius  $3.5\text{cm}$  with centre C.
- (iv) Join A to B.

Hence,  $\triangle ABC$  is required  $\triangle$ .

(vi)  $m\overline{AB} = 2.5\text{cm}$ ,  $m\angle A = 30^\circ$ ,  $m\angle B = 105^\circ$

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-609869

## Construction:-

- (i) Draw a line segment  $m\overline{AB} = 2.5\text{cm}$
- (ii) Make an angle of  $m\angle A = 30^\circ$
- (iii) Make an angle of  $m\angle B = 105^\circ$
- (iv) These rays intersect each other at a point C to complete  $\triangle ABC$ .

Hence,  $\triangle ABC$  is a required  $\triangle$ .

**(vii)  $m\overline{AB} = 3.6\text{cm}$ ,  $m\angle A = 75^\circ$ ,  $m\angle B = 45^\circ$**

## Construction:-

- (i) Draw a line segment  $m\overline{AB} = 3.6\text{cm}$
- (ii) Make an angle of  $m\angle A = 75^\circ$
- (iii) Make an angle of  $m\angle B = 45^\circ$
- (iv) These ray intersect each oth at point C to complete  $\triangle ABC$ .

Hence,  $\triangle ABC$  is required  $\triangle$

2. Construct  $\Delta XYZ$ , in which 17

(i)  $m\overline{YZ} = 7.6\text{cm}$ ,  $m\overline{XY} = 6.1\text{cm}$ ,  $m\angle X = 90^\circ$

Instructor  
Rana Mujeeb  
0303-6098695

**Construction:-**

- (i) Draw a line segment  $m\overline{XY} = 6.1\text{cm}$
- (ii) Make an angle of  $m\angle X = 90^\circ$ .
- (iii) Draw an arc of radius  $7.6\text{cm}$  with centre  $X$ .
- (iv) Join  $Z$  to  $Y$ .

Instructor  
Rana Mujeeb  
0303-6098695

Hence,  $\Delta XYZ$  is required  $\Delta$ .

(ii)  $m\overline{ZX} = 6.4\text{cm}$ ,  $m\overline{YZ} = 2.4\text{cm}$ ,  $m\angle Y = 90^\circ$

Instructor  
Rana Mujeeb  
0303-6098695

## Construction:-

- (i) Draw a line segment  $m\overline{YZ} = 2.4\text{cm}$
- (ii) Make an angle of  $m\angle Y = 90^\circ$
- (iii) Draw an arc of radius  $6.4\text{cm}$  with centre Z.
- (iv) Join X to Z.

Hence,  $\Delta XYZ$  is required  $\Delta$ .

(iii)  $m\overline{XY} = 5.5\text{cm}$ ,  $m\overline{ZX} = 4.5\text{cm}$ ,  $m\angle Z = 90^\circ$

## Construction:-

- (i) Draw a line segment  $m\overline{ZX} = 4.5\text{cm}$
- (ii) Make an angle of  $m\angle Z = 90^\circ$
- (iii) Draw an arc of radius  $5.5\text{cm}$  with centre X.

- (iv) Join Y to X.

Hence,  $\Delta XYZ$  is required  $\Delta$

3. Construct a right-angled  $\Delta$  measure of whose hypotenuse is 5cm and one side is 3.2cm.

### Construction:-

- (i) Draw a line segment  $m\overline{AB} = 5\text{cm}$
  - (ii) Draw a right Bisector  $\overleftrightarrow{LM}$  of  $\overline{AB}$  which intersect it at O.
  - (iii) Draw a semi-circle of radius equals to  $m\overline{OA}$  and  $m\overline{OB}$ .
  - (iv) Draw an arc of radius 3.2cm from centre A.
  - (v) Join A to C & B to C
- Hence,  $\Delta ABC$  is required  $\Delta$ .

Instructor  
Rana Mujeeb  
0303-6098695

4. Construct a right-angled <sup>20</sup> isosceles  $\Delta$  whose hypotenuse is

(i) 5.2 cm

Instructor  
Rana Mujeeb  
0303-6098695

### Construction:-

- (i) Draw a line segment  $m\overline{AB} = 5.2\text{ cm}$
- (ii) Draw a right bisector  $\overleftrightarrow{LM}$  of  $\overline{AB}$  which intersect it at  $O$ .
- (iii) Draw a semi-circle of radius equals to  $m\overline{OA}$  &  $m\overline{OB}$ . Join  $C$  to  $A$  and  $C$  to  $B$ .

Hence,  $\Delta ABC$  is required  $\Delta$

(ii) 4.8 cm

21

### Construction:-

- (i) Draw a line segment  $m\overline{AB} = 4.8\text{cm}$ .
- (ii) Draw right bisector of  $\overleftrightarrow{LM}$  of  $\overline{AB}$  which intersect it at O.
- (iii) Draw a semi-circle of radius equals to  $m\overline{OA}$  &  $m\overline{OB}$
- (iv) Join C to A & C to B.

Hence,  $\triangle ABC$  is required  $\triangle$ .

Instructor

Instructor  
Ran. Mujeeb  
03-3-6098695

Instructor  
Ran. Mujeeb  
03-3-6098695

- (i) Draw a line segment  $\overline{AB} = 5.4 \text{ cm}$   
(ii) Draw a right bisector  $\overleftrightarrow{LM}$  of  $\overline{AB}$   
which intersect at  $O$ .  
(iii) Draw a semi-circle of radius  
equals to  $\overline{OA}$  &  $\overline{OB}$   
(iv) Join  $C$  to  $A$  &  $C$  to  $B$

Hence,  $\triangle ABC$  is required  $\triangle$ .

Instructor

 Ran. Mujeeb  
03-3-6098695

## 5. (Ambiguous Case) Construct

a  $\triangle ABC$ , in which—

- (i)  $m\overline{AC} = 4.2\text{ cm}$ ,  $m\overline{AB} = 5.2\text{ cm}$ ,  $m\angle B = 45^\circ$

### Construction—

Instructor

Rana Mujeeb

0303-6098695

- (i) Draw a line segment  $m\overline{AB} = 5.2\text{ cm}$
- (ii) Make an angle of  $m\angle B = 45^\circ$
- (iii) Draw an arc of radius  $4.2\text{ cm}$  with centre A.
- (iv) The arc intersect the ray at C & C'.
- (v) Join A to C & A to C'.

Hence,  $\triangle ABC$  &  $\triangle ABC'$  are constructed

Instructor

Rana Mujeeb

0303-6098695

(ii)  $m\overline{BC} = 2.5\text{cm}$ ,  $m\overline{AB} = 5.0\text{cm}$ ,  $m\angle A = 30^\circ$

### Construction:-

- (i) Draw a line segment  $m\overline{AB} = 5.0\text{cm}$
- (ii) Make an angle of  $m\angle A = 30^\circ$
- (iii) Draw an arc of radius  $2.5\text{cm}$  with centre B.
- (iv) Join B to C.

Hence,  $\triangle ABC$  is constructed.

(iii)  $m\overline{BC} = 5\text{cm}$ ,  $m\overline{AC} = 3.5\text{cm}$ ,  $m\angle B = 60^\circ$

## Construction

- (i) Draw a line segment  $m\overline{BC} = 5\text{cm}$
- (ii) Make an angle of  $m\angle B = 60^\circ$
- (iii) Draw an arc of radius  $3.5\text{cm}$  with centre C.
- (iv) The arc does not intersect the ray at any point.

Hence,  $\triangle ABC$  cannot be constructed.

### Ex 17.2

1. Construct the following  $\triangle ABC$ . Draw the bisectors of their angles and verify their concurrency.

- (i)  $m\overline{AB} = 4.5\text{cm}$ ,  $m\overline{BC} = 3.1\text{cm}$ ,  $m\overline{CA} = 5.2\text{cm}$

Instructor  
Ranjana Jeeb  
03-60-3695

# Construction-

27

- (i) Draw a line segment  $m\overline{CA} = 5.2\text{cm}$
- (ii) Draw an arc of radius  $4.5\text{cm}$  from centre A.
- (iii) Draw an arc of radius  $3.1\text{cm}$  from centre C.
- (iv) These two arcs cut each other at B.
- (v) Join A to B and B to C to complete  $\Delta ABC$ .
- (vi) Draw angle bisector of  $\angle C$  and  $\angle A$  which meets at I.
- (vii) Draw angle bisector of  $\angle B$  which also meet at I.

Hence, concurrency of angle bisectors of  $\Delta ABC$  is proved.

ii)  $m\overline{AB} = 4.2\text{cm}$ ,  $m\overline{BC} = 6\text{cm}$ ,  $m\overline{CA} = 5.2\text{cm}$

Instructor  
Rana M. Jeeb  
0303-603695

0303-603695

## Construction:-

- (i) Draw a line segment  $= 5.2 \text{ cm}$
- (ii) Draw an arc of radius  $6 \text{ cm}$  with centre  $C$ .
- (iii) Draw an arc of radius  $4.2 \text{ cm}$  with centre  $A$ .
- (iv) These two arcs cut each other at  $B$ .
- (v) Join  $B$  to  $C$  &  $B$  to  $A$  to complete  $\triangle ABC$ .
- (vi) Draw angle bisector of  $\angle C$  &  $\angle A$  which meets at  $I$ .
- (vii) Draw angle bisector of  $\angle B$  which also meet at  $I$ .

Hence, concurrency of angle bisectors of  $\triangle ABC$  is proved.

(iii)  $m \overline{AB} = 3.6 \text{ cm}$ ,  $m \overline{BC} = 4.2 \text{ cm}$ ,  $m \angle A = 75^\circ$

# Construction-

29

- (i) Draw a line segment  $m\overline{BC} = 4.2\text{cm}$
- (ii) Make an angle of  $m\angle B = 75^\circ$
- (iii) Draw an arc of radius  $3.6\text{cm}$  with centre B.
- (iv) Join A to C. to complete  $\triangle ABC$ .
- (v) Draw angle bisector of  $\angle C$  and  $\angle A$  which meets at I.
- (vi) Draw angle bisector of  $\angle B$  which also meet at I.

Hence, concurrency of angle bisectors of  $\triangle ABC$  is proved.

0303-6018695

### Construction:-

- (i) Draw a line segment  $m\overline{AB} = 5.3\text{ cm}$
- (ii) Make an angles of  $m\angle A = 45^\circ$  &  
 $m\angle B = 30^\circ$
- (iii) These two rays of  $\angle A$  and  $\angle B$  cut each other at C. to complete  $\Delta ABC$ .
- (iv) Draw perpendicular bisector of  $\overline{AB}$  and  $\overline{BC}$  which meet at O.

(v) Draw perpendicular bisector of  $\overline{AC}$  which also meet at  $O$ .

Hence, perpendicular bisectors of the sides of  $\triangle ABC$  are concurrent at  $O$ , which is outside

Qii)  $m\overline{BC} = 2.9\text{cm}$ ,  $m\angle A = 30^\circ$ ,  $m\angle B = 60^\circ$

$$m\angle A + m\angle B + m\angle C = 180^\circ$$

$$30^\circ + 60^\circ + m\angle C = 180^\circ$$

$$90^\circ + m\angle C = 180^\circ$$

$$m\angle C = 180^\circ - 90^\circ$$

$$m\angle C = 90^\circ$$

Instructor  
Rahim Majeed  
0303-6098695

Instructor  
Rahim Majeed  
0303-6098695

## Construction:-

- (i) Draw a line segment  $m\overline{BC} = 2.9\text{cm}$
- (ii) Make an angles of  $m\angle B = 60^\circ$  &  $m\angle C = 90^\circ$ .

(iii) These two rays of  $\angle B$  and  $\angle C$  cut each other at A. to complete  $\triangle ABC$ .

(iv) Draw perpendicular bisectors of  $\overline{AB}$  and  $\overline{BC}$  which meet at O.

(v) Draw perpendicular bisector of  $\overline{AC}$  which also meet at O.

Hence, perpendicular bisectors of the sides of  $\triangle ABC$  are concurrent at O, which is at hypotenuse of the right  $\triangle ABC$ .

(vi)  $m\overline{AB} = 2.4\text{cm}$ ,  $m\overline{AC} = 3.2\text{cm}$ ,  $m\angle A = 120^\circ$

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-6098695

### Construction:-

- (i) Draw a line segment  $m\overline{AC} = 3.2\text{cm}$
- (ii) Make an angle of  $m\angle A = 120^\circ$

(iii) Draw an arc of radius  $2.4\text{cm}$  with centre  $A$ .

(iv) Join  $A$  to  $C$  to complete  $\triangle ABC$ .

(v) Draw perpendicular bisectors of  $\overline{AB}$  and  $\overline{BC}$  which meets at  $O$ .

(vi) Draw perpendicular bisector of  $\overline{AC}$  which also meets at  $O$ .

Hence, Perpendicular bisector of the sides of  $\triangle ABC$  are concurrent at  $O$ , which is outside.

4. Construct the following  $\triangle s$   $XYZ$ , Draw their three medians and show that they are concurrent:-

(ii)  $m\overline{XY} = 4.5\text{cm}$ ,  $m\overline{YZ} = 3.4\text{cm}$ ,  $m\overline{ZX} = 5.6\text{cm}$

Instructor  
Rana M. Jeeb  
0313-6098695

Instructor  
Rana M. Jeeb  
0313-6098695

# Construction

Rana Mujeeb 120  
0303-6098695 37

- (i) Draw a line segment  $m\overline{ZX} = 5.6\text{cm}$
- (ii) Draw an arc of radius  $4.5\text{cm}$  with centre  $X$  & draw an arc of radius  $3.4\text{cm}$  with centre  $Z$ .
- (iii) These two arcs cut each other at  $Y$ .
- (iv) Join  $Y$  to  $Z$  and  $Y$  to  $X$  to complete  $\triangle XYZ$ .
- (v) Draw perpendicular bisectors of  $\overline{ZX}$ ,  $\overline{XY}$  and  $\overline{ZY}$  to find the midpoints as  $A$ ,  $B$ , and  $C$  respectively.
- (vi) Join  $Y$  to  $A$  to get median  $\overline{YA}$ .
- (vii) Join  $Z$  to  $B$  to get median  $\overline{ZB}$ .
- (viii) Join  $X$  to  $C$  to get median  $\overline{XC}$ .

Hence all the medians are concurrent at  $O$ .

(i)  $m\overline{YZ} = 4.1\text{cm}$ ,  $m\angle Y = 60^\circ$ ,  $m\angle X = 75^\circ$

$$m\angle Y + m\angle X + m\angle Z = 180^\circ$$

$$60^\circ + 75^\circ + m\angle Z = 180^\circ$$

$$135^\circ + m\angle Z = 180^\circ$$

$$m\angle Z = 180^\circ - 135^\circ$$

$$m\angle Z = 45^\circ$$

Instructor  
Rana Mujeeb  
0303-6098695

Instructor  
Rana Mujeeb  
0303-6098695

### Construction:-

(i) Draw a line segment  $m\overline{YZ} = 4.1\text{cm}$

(ii) Make an angles of  $m\angle X = 60^\circ$  &

$$m\angle Z = 45^\circ$$

(iii) The two rays  $\angle X$  and  $\angle Z$  cut each other at  $X$  to complete  $\triangle XYZ$ .

(iv) Draw the perpendicular bisectors of

$\overline{YZ}$ ,  $\overline{XZ}$ ,  $\overline{XY}$  to find their mid-points

$A, B$  and  $C$  respectively.

(v) Join  $X$  to  $A$  to get median  $\overline{XA}$ .

(vi) Join  $Y$  to  $C$  to get median  $\overline{YC}$ .

(vii) Join  $Z$  to  $B$  to get median  $\overline{ZB}$ .

Hence, all the medians are concurrent at  $G$ .

(iii)  $m\overline{ZX} = 4.3\text{cm}$ ,  $m\angle X = 75^\circ$ ,  $m\angle Y = 45^\circ$

$$m\angle X + m\angle Y + m\angle Z = 180^\circ$$

$$75^\circ + 45^\circ + m\angle Z = 180^\circ$$

$$120^\circ + m\angle Z = 180^\circ$$

$$m\angle Z = 180^\circ - 120^\circ$$

$$m\angle Z = 60^\circ$$
